Contributing companies

The fatality and permanent impairment statistics in this Report for 2022 and 2023 were derived from data provided by the following companies. Note not all companies listed provided data for both 2022 and 2023.

ADDAX Petroleum Limited	Eni	PETRONAS Carigali
ADNOC	Equinor ASA	Pluspetrol
Assala Energy	ExxonMobil	Prime Energy
Aker BP	Genel Energy	PTTEP
Azule	Gulf Keystone	Qatar Energy
Bapco Energies	Harbour Energy	Qatar Energy LNG
Basrah Gas Company	Hess Corporation	Repsol
Beach Energy	INPEX Corporation	Shell Companies
bp	KMG	SOCAR
BW Energy	Kosmos Energy	Sonangol
Capricorn Energy	Kuwait Oil Company	Spirit Energy
CCED	MOL	Suncor
Cenovus	Neptune Energy	TotalEnergies
CEPSA EP	North Oil Company	Trident Energy
Chevron	OMV	Tullow Oil
CNOOC	ONGC	Vår Energy
ConocoPhillips	Orlen	Wintershall Dea
Crescent Petroleum	Oxy	Woodside
Dana Gas	Pan American Energy	YPF SA
Dolphin Energy	Petrobras	

Introduction, scope, and background

IOGP has set a course for our industry to focus on preventing life-changing injuries and fatalities. In 2022, an Expert Group was set up to agree upon a common industry definition of actual, potential, and near miss fatality and permanent impairment (FPI) injuries.

Although significant progress has been made by IOGP Member Companies in reducing the Lost Time Injury Rate (LTIR) and Total Recordable Injury Rate (TRIR), we have reached a plateau, as shown in Figure 1.

While a reduction in overall injury rates is positive, not all recordable or even lost time injuries are equivalent. For the purposes of TRIR, an injury that results in a single stitch to a finger has the same statistical weighting in the rate calculation as a fatality. A rate with such a broad scope of injury classification does not give any indication of injury severity. Addressing the most severe injuries, those which change people's lives, needed to be prioritized, i.e. focus on what matters most.

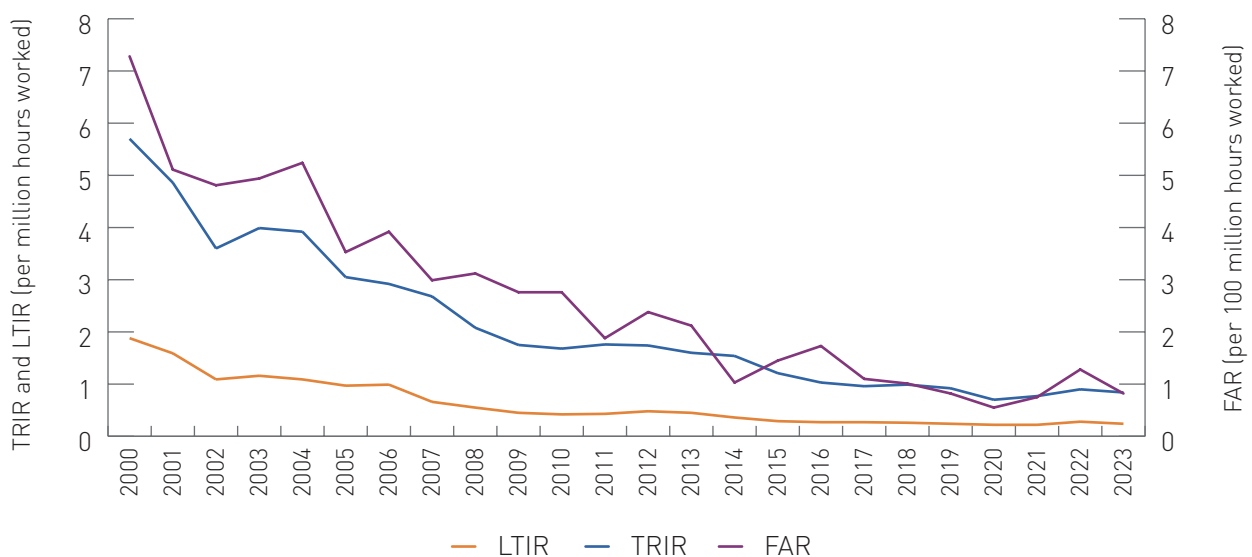

Figure 1: FAR, TRIR and LTIR, 2000-2023

Focusing on controls and safeguards to primarily prevent fatalities has been shown to have reduced the number of recordable injuries,¹ but many organizations commit much of their Health, Safety, and Environment (HSE) resources trying to reduce the number of recordable injuries. This focus on reducing high-volume, lower severity injuries (as shown on the right-hand side of Figure 2), such as slips and trips (at the same height), cuts, punctures and scrapes, overexertion, strain, etc.) may have the desired effect on reducing TRIR, but it is highly unlikely to reduce the number of life-changing injuries and fatalities.

¹ Peuscher, W., [Groeneweg J.](#) 2012.

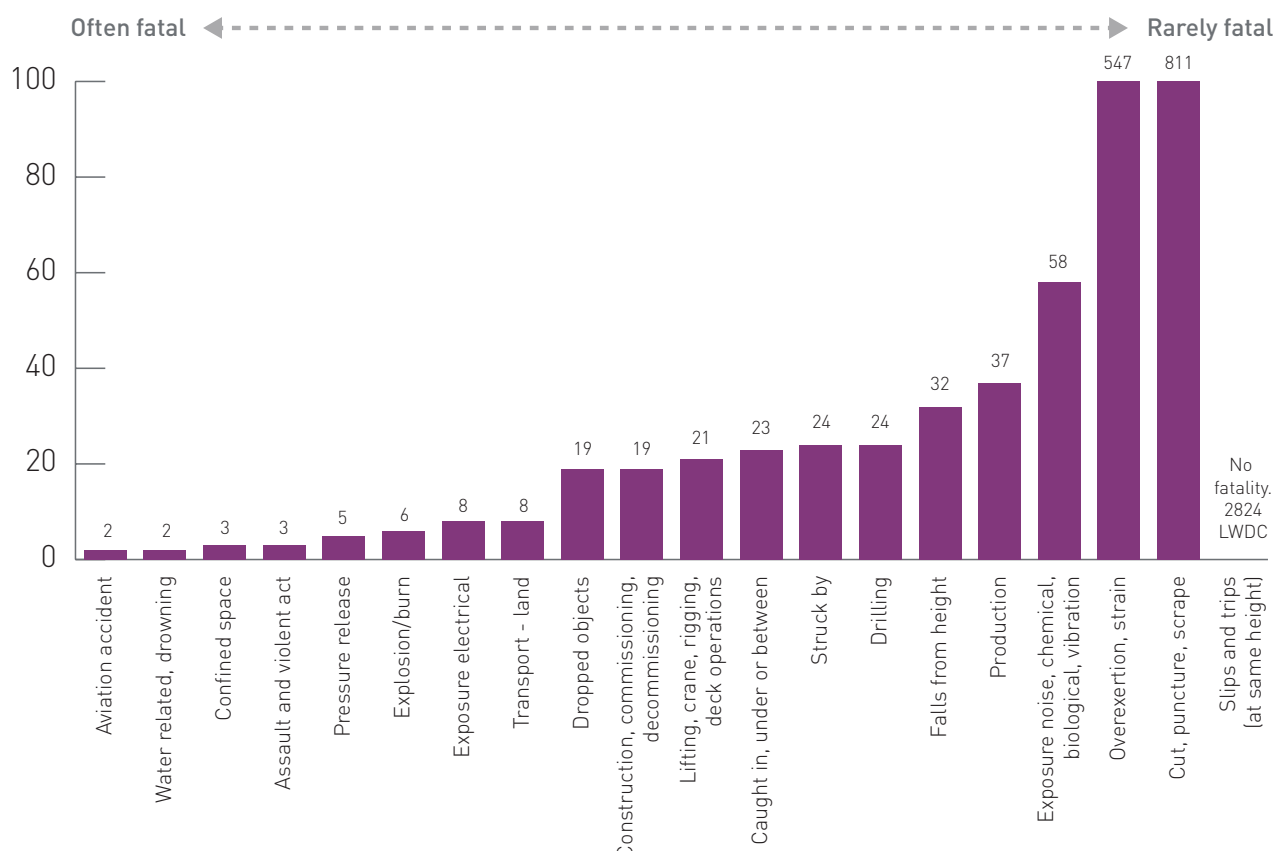

Figure 2: Fatality to LTI (fatality + lost work day case) ratio by cause or activity, 2009 - 2023

The IOGP FPI definitions are designed for use in energy industry reporting. They are deliberately concise and concept based. The concepts are provided in plain language to facilitate reliable interpretation and application across a wide range of potential scenarios by industry personnel without health qualifications. The classification of a permanent impairment injury as per the definition should be determinable from a basic assessment of known injuries assisted by injury reports, medical certificates, and/or worker self-reports of current status.

These definitions are aligned to recognized international systems of classification including the

- American Medical Association Guides: The Sixth Edition
- World Health Organization (WHO) International Classification of Functioning, Disability, and Health (ICF)

The scope of this initial Report includes two years of data which is insufficient for meaningful trend analysis but does demonstrate the consistent classification and understanding by reporting companies of the new PI injury definition.

The data in this Report were collected from IOGP Member Companies, on a voluntary basis, for 2022 and 2023.

The 2022 data were first requested from Member Companies mid-year in 2023. 2022 results represent data from 37 Member Companies and 90% of hours in the annual safety performance database.

Our first full set of data collected for 2023 cover 100% of the work hours (58 companies) in the safety performance data base. This includes data submitted through the annual submission process and a secondary data collection, mid-year, to include any delayed deaths and accurate permanent impairment injury reporting, allowing for the final classification decision at 180 days after the incident.

Quality Assurance (QA)/Quality Control (QC) was carried out on the data submitted to assure consistency in classification. The definition used for this Report is in Section 1.

For additional background on the development of the FPI definition and data collection, Walker et al, 2024.

1. Definition and criteria

1.1 Definition

The definition for FPI injury data submitted by IOGP Member Companies in this Report is below.

Fatality

A death as a result of a work-related incident. 'Delayed' deaths that occur within 180 days post incident are to be included if the death was a direct result of the incident (refer to the annual IOGP Safety Performance Indicators User Guide for the definition and further guidance on fatality, 'delayed' deaths, work-related, and injury).

Permanent Impairment (PI)

Permanent impairment is defined as the outcome of a work-related injury from which the worker cannot or is not expected to return to their previous (pre-incident) whole person function as a result of an acute, single incident, resulting in any of the following:

- permanent loss of body parts
- permanent reduction of organ's physiological function
- permanent reduction in skin and musculoskeletal function
- permanent reduction in psychological, social, or cognitive function

For reporting purposes, the classification is to be made within 180 days of the injury.

"Whole person function" relates to a person's physiological/psychological status.

Impairment is defined as either, or both:

- loss of ability to return to the previous work role
- loss of ability to perform the activities of daily living (ADL)

1.2 Permanent Impairment criteria

The permanent impairment metric is met by any of the below criteria singularly or in combination. Impairment may occur to physical, psychological, or social function if related to an acute/single incident.

Permanent loss of body parts

Permanent loss of body parts as a result of an acute/single incident due to mechanical trauma, thermal trauma, radioactivity, vibration, chemical exposure, or other, including but not limited to:

- amputations with loss of bone, inclusive of one or more joints (not able to be reattached)
- loss of eye(s)

- loss of internal organs, e.g., kidney, spleen (may also meet criteria for permanent reduction of organ function)
- loss of facial structures, e.g., nose, ears, leading to disfigurement
- loss of genitalia or other sexual organs
- successful use of prostheses (for functional or cosmetic purposes) does not negate a permanent impairment definition.

If any of the above are met, the injury is defined as permanent impairment. For any other injury resulting in loss of body parts, when classification of permanent impairment is unclear, a medical professional's opinion should be used to determine permanent impairment.

Permanent reduction of organ function

Permanent reduction in an organ's physiological function as a result of an acute/single incident due to a mechanical trauma, thermal trauma, radioactivity, vibration, chemical exposure or other, including but not limited to:

- eye injury with permanent loss of vision
- bowel injury requiring permanent stoma
- spinal injury requiring ongoing use of wheelchair
- brain injury causing ongoing epilepsy (recurrent seizures)
- heart injury with impaired exertion tolerance/ measurable permanent loss of function
- lung injury, including inhalation, with impaired exertion tolerance/measurable permanent loss of function
- injury causing loss of smell that creates an ongoing safety concern or significant personal impact
- ear injury with permanent loss of hearing- (at least equivalent to an OSHA recordable shift), or persistent tinnitus (ear ringing) post injury after exposure to a blast
- post injury complex pain disorders with ongoing uncontrolled pain and/or disrupted nerve and musculoskeletal function
- genital or other sexual organ injury leading to permanent loss of function

If any of the above are met, the injury is defined as permanent impairment. For any other injury resulting in permanent reduction of organ function, when classification of permanent impairment is unclear, a medical professional's opinion should be used to determine permanent impairment.

Permanent reduction in skin and/or musculoskeletal function

Permanent reduction in skin and/or musculoskeletal function as a result of an acute/single incident due to a mechanical trauma, thermal trauma, radioactivity, vibration, chemical exposure, or other, including but not limited to:

- Deep burns with scarring or skin grafts that permanently impair body movement or other function. These are usually 2nd or 3rd degree burns and may be caused by thermal or chemical exposure. This includes a reduction of skin integrity, hypersensitivity to touch or skin fragility leading to friction ulceration. Burns that cause significant disfigurement or change to physical appearance resulting in a permanent impairment due to psychological, social or cognitive function would be considered under this criteria.
- Tendon/ligament tear with ongoing abnormal joint range of movement for normal work or general function, e.g. cannot reach overhead, cannot squat, or cannot kneel.
- Traumatic soft tissue injury to shoulder/knee/elbow with ongoing abnormal joint range of movement.
- Fracture with ongoing impairment to mobility.
- Amputation with successful reattachment but permanent abnormal function.

If any of the above are met, the injury is defined as permanent impairment. For any other injury resulting in permanent reduction in skin and/or musculoskeletal function, when classification of permanent impairment is unclear, a medical professional's opinion should be used to determine permanent impairment.

Permanent reduction in psychological, social, or cognitive function

Permanent reduction in psychological, social, or cognitive function as a result of an acute/single incident with psychological trauma, including an inability to self-care, and/or an inability to maintain previous work, social, and community relationships, post incident, including but not limited to:

- brain injury with ongoing impact to emotional regulation, speech, memory, or other cognitive dysfunction
- post injury psychiatric disorders including Post Traumatic Stress Disorder (PTSD) with inability to return to previous work role and/or schedule

If any of the above are met, the injury is defined as permanent impairment. For any other injury resulting in permanent reduction in psychological, social or cognitive function, when classification of permanent impairment is unclear, a medical professional's opinion should be used to determine permanent impairment.

Examples, associated Frequently Asked Questions (FAQ) that have helped support Member Companies in the classification process, and any future updates to the definition, are available at <https://iogp.org/fpi>.

2. Summary of results

A summary of the 2022 and 2023 data submission is shown in Table 1. All data reported is against the definition in Section 1 and should not be compared with any previously published draft results.

Table 1: 2022 and 2023 IOGP Member Company FPI data collection

	2022	2023
Total number of IOGP Member Companies (eligible to report, i.e., excludes associate and association members) at the time of data collection	65	71
Member Companies reporting safety performance indicator data	51	58
Member Companies represented in this report (excludes those not reporting permanent impairment data)	37*	58
Work hours	2,331 million*	3,291 million
Percentage of total hours in the safety performance indicator database	90%*	100%
Countries represented	90*	92
Fatalities	29*	27
PI injuries reported	16*	31
PIR – PI injuries per 100 million hours	0.69*	0.94
FPIR – FPI per 100 million hours	1.93*	1.76
FAR – fatalities per 100 million hours	1.24*	0.82
* The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s – <i>Safety Performance Indicators 2022</i> because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.		

Definitions

Permanent impairment rate (PIR)

Number of company/contractor PI injuries per 100 million hours worked

FPI rate (FPIR)

Number of company/contractor fatalities** plus PI injuries per 100 million hours

Fatal accident rate (FAR)

The number of company/contractor fatalities** per 100 million hours worked

**In this Report, excludes fatalities where PI data (zero or greater) were not reported.

3. 2022 and 2023 results - overall

3.1 Number of fatalities and permanent impairment injuries

Table 2: Number of fatalities and permanent impairment injuries

Company/contractor	2022*			2023		
	Onshore	Offshore	Overall	Onshore	Offshore	Overall
Fatalities						
Company	2	0	2	4	2	6
Contractor	20	7	27	18	3	21
OVERALL	22	7	29	22	5	27
Permanent impairment injuries						
Company	0	1	1	5	0	5
Contractor	14	1	15	13	13	26
OVERALL	14	2	16	18	13	31
Fatality or permanent impairment incidents						
Company	1	1	2	8	1	9
Contractor	31	7	42	23	16	39
OVERALL	34	10	44	31	17	48

* The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s - *Safety Performance Indicators 2022* because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.

Note that the total number of injuries does not necessarily equal the number of incidents in which injuries/fatalities occurred, for example, in 2023 contractor onshore, there were 12 deaths in 4 multiple fatality incidents. One 2022 contractor onshore incident had 2 deaths and 1 PI. In all other PI incidents, there was one PI per incident.

3.2 Fatal accident rate (FAR)

The FAR for 2022 and 2023 for the FPI data reported is shown in table 3.

Table 3: Fatal accident rate

Fatal accident rate (FAR)		
	2022*	2023
Company	0.34	0.68
Contractor	1.55	0.87
OVERALL	1.24	0.82
Onshore	1.29	0.90
Offshore	1.11	0.59

* The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s - *Safety Performance Indicators 2022* because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.

3.3 Permanent impairment rate (PIR)

The PIR for 2022 and 2023 is shown in table 4.

Table 4: Permanent impairment rate

Permanent impairment rate (PIR)		
	2022*	2023
Company	0.17	0.57
Contractor	0.86	1.08
OVERALL	0.69	0.94
Onshore	0.82	0.74
Offshore	0.32	1.52

* The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s - *Safety Performance Indicators 2022* because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.

3.4 Fatality and permanent impairment rate (FPIR)

The FPIR for 2022 and 2023 is shown in table 5.

Table 5: Fatality and permanent impairment rate

Fatality and permanent impairment rate (FPIR)		
	2022*	2023
Company	0.51	1.25
Contractor	2.41	1.95
OVERALL	1.93	1.76
Onshore	2.12	1.64
Offshore	1.43	2.11

*The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s - *Safety Performance Indicators 2022* because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.

3.5 By PI category and subcategory

In 2023, 42% of reported PI were categorized as ‘permanent reduction in skin and/or musculoskeletal function’ (50% in 2022), and 36% were categorized as ‘permanent loss of body parts’ (37% in 2022).

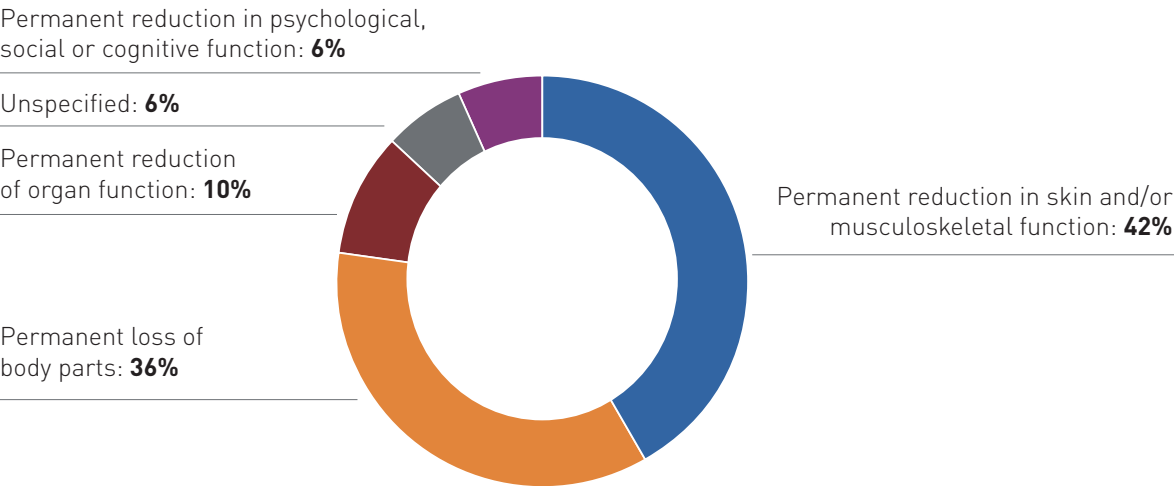

Figure 3: PI injuries by category 2023

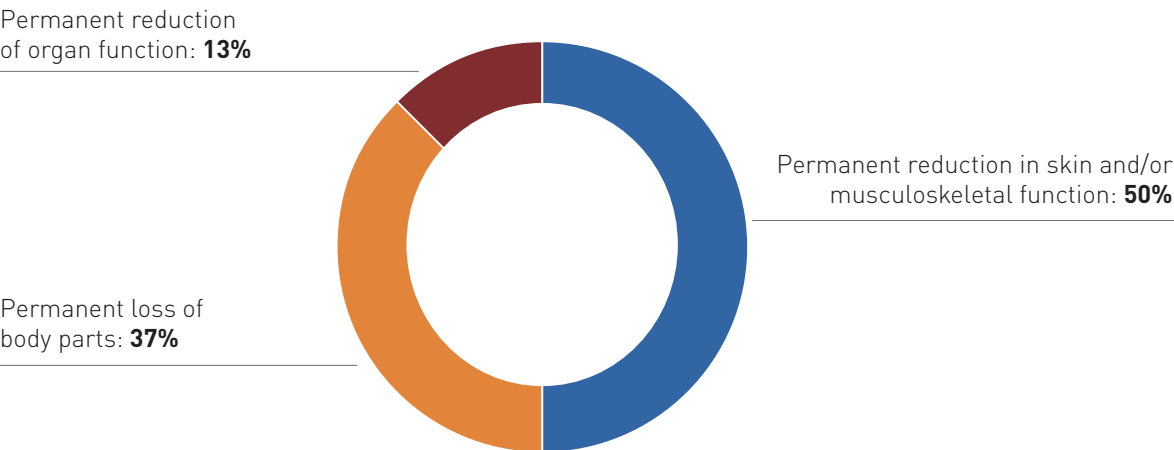

Figure 4: PI injuries by category 2022

In 2023, 36% of reported PI were amputations with loss of bone inclusive of one or more joints (not able to be reattached) [31% in 2022], and 23% were fractures with ongoing impairment to mobility (38% in 2022)

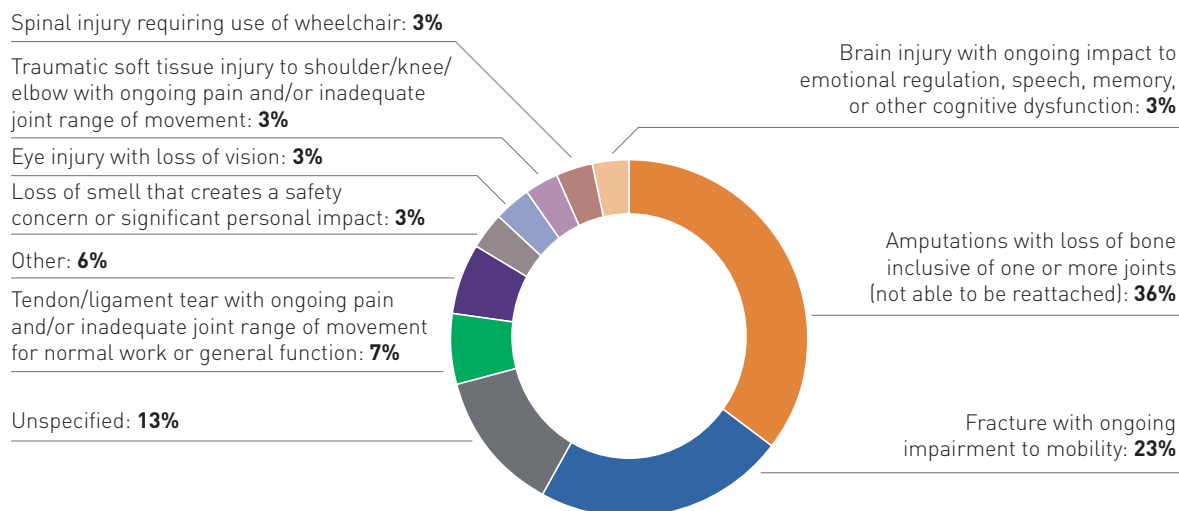

Figure 5: PI injuries by subcategory 2023

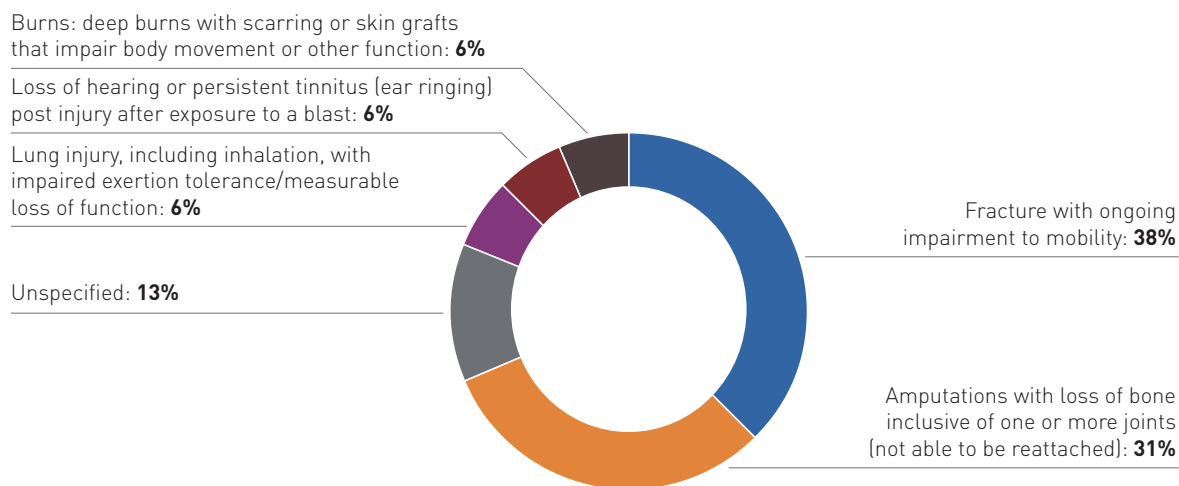

Figure 6: PI injuries by subcategory 2022

3.6 By cause and activity

Table 6: Number of fatalities and permanent impairment injuries by cause and activity 2022-2023

Activity	Cause													
	Assault or violent act	Aviation accident	Caught in, under or between (excl. dropped objects)	Dropped objects	Explosion, fire or burns	Exposure electrical	Exposure noise, chemical, biological, vibration, extreme temperature	Falls from height	Overexertion, strain	Pressure release	Slips and trips (at same height)	Struck by (not dropped object)	Water related, drowning	Unspecified - Other
														Total
Construction, commissioning, decommissioning			3	2		1		1	1	4		1		13
Drilling, workover, well operations			9	2			2	4		1	1	6		25
Excavation, trenching, ground disturbance			1											1
Lifting, crane, rigging, deck operations			3	5								1		11
Maintenance, inspection, testing			2	2	3	1	2		1	2		3		16
Production operations	7				3					2	1	3		16
Transport - Air		1												2
Transport - Land	2		5	1	2									10
Transport - Water, incl. marine activity			3		1							2		6
Unspecified - other			1									1	1	3
Total	9	1	27	12	9	2	4	5	2	9	2	17	1	103

By cause, in 2023, 42% of the reported PI were categorized as ‘caught in, under or between (excluding dropped objects)’ (32% in 2022), and 26% were categorized as ‘struck by (not dropped object)’ (6% in 2022). Dropped objects accounted for 7% of the PI reported in 2023 (19% in 2022).

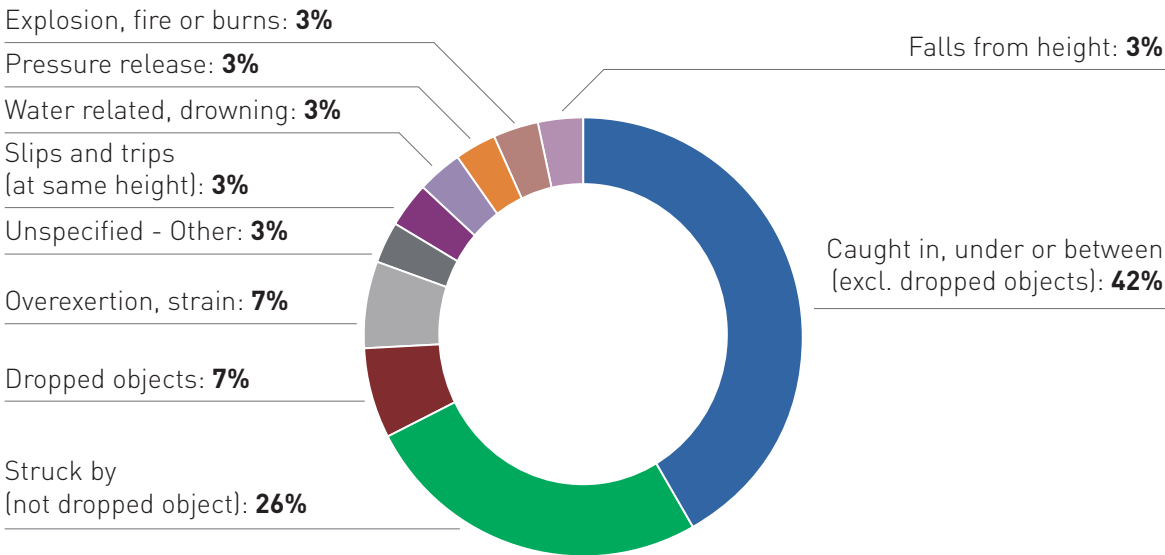

Figure 7: PI injuries by cause 2023

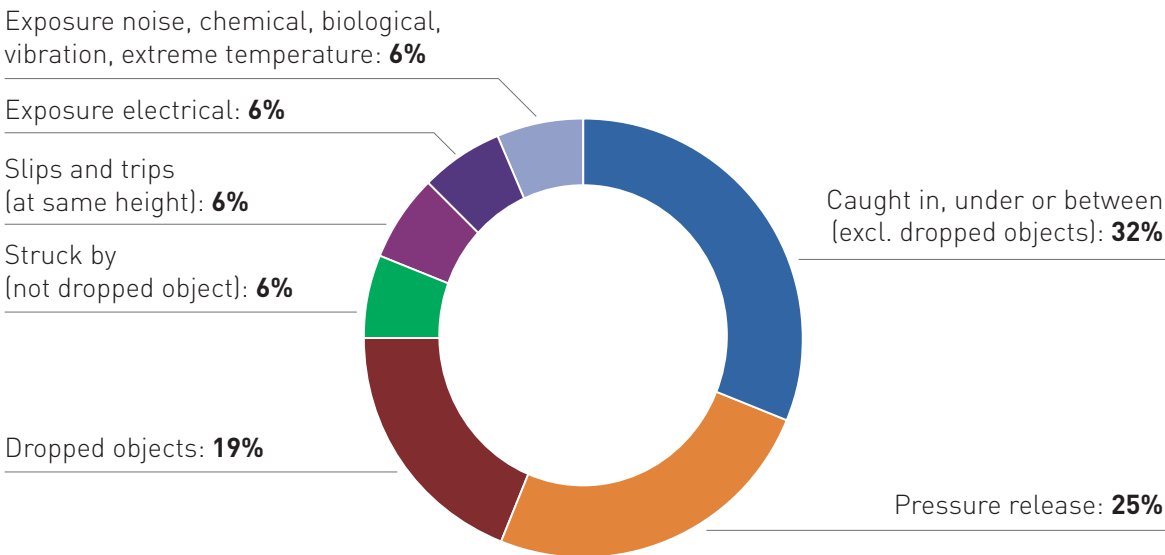

Figure 8: PI injuries by cause 2022

By activity, in 2023, 23% of the reported PI were categorized as ‘drilling, workover, well operations’ (38% in 2022), 16% were categorized as ‘maintenance, inspection, testing’ (25% in 2022), 16% were categorized as ‘production operations’ (6% in 2022), and 16% were categorized as ‘transport – water, including marine activity’ (none reported in 2022).

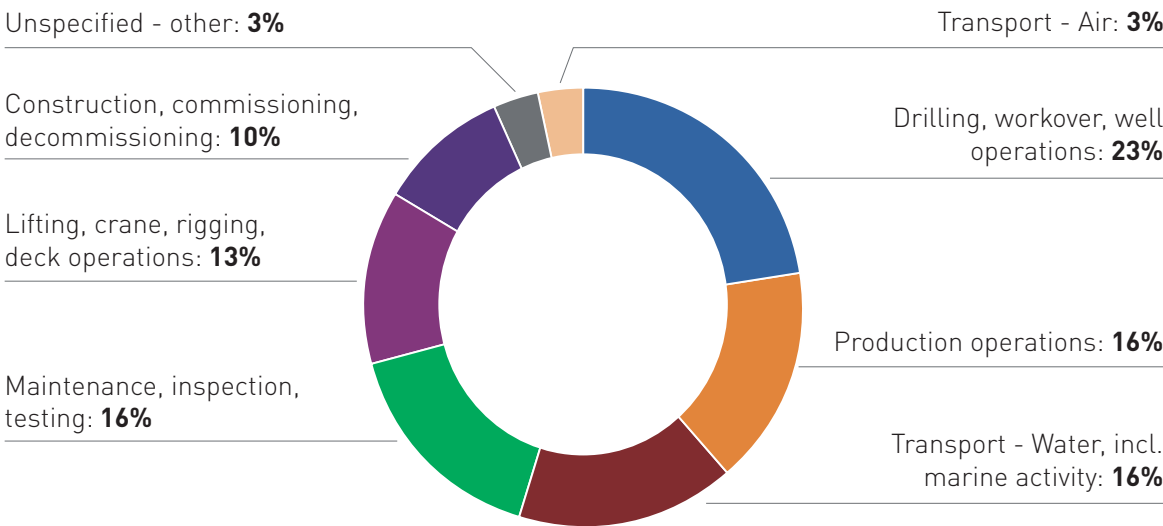

Figure 9: PI injuries by activity 2023

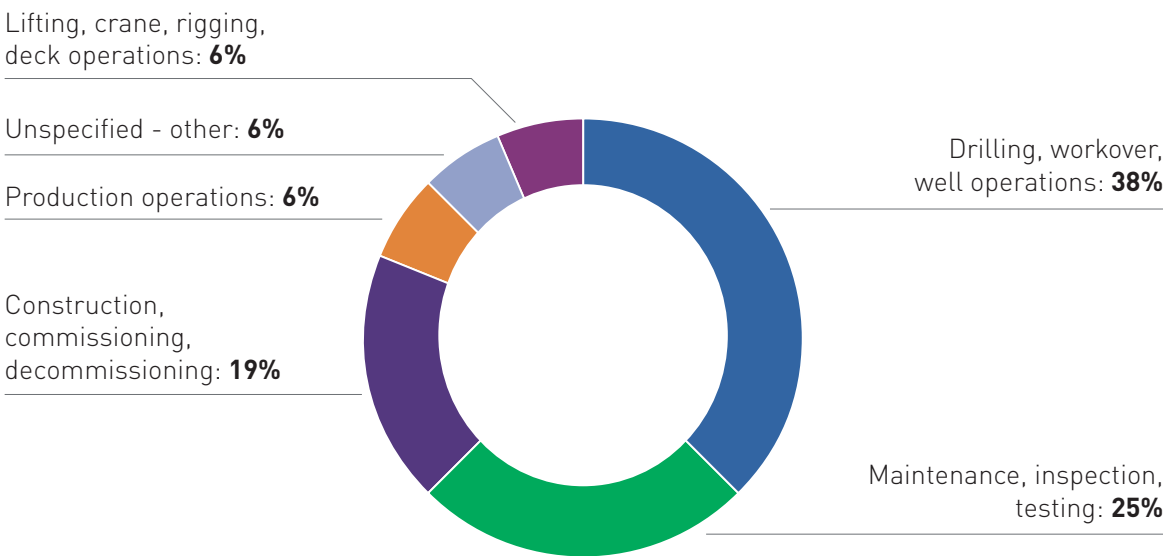

Figure 10: PI injuries by activity 2022

3.7 Fatalities and permanent impairment injuries by Life-Saving Rule

The review of collected data indicates that, in 2023, 82% of reported PI were related to IOGP Life-Saving Rules in 2023, and 87% in 2022.

If the 'line of fire' IOGP Life-Saving Rule had been applied, 55% of the PI reported in 2023 might have been prevented (56% in 2022). Application of the 'energy isolation' Life-Saving Rule might have prevented 13% of the reported PI in 2023 (19% in 2022).

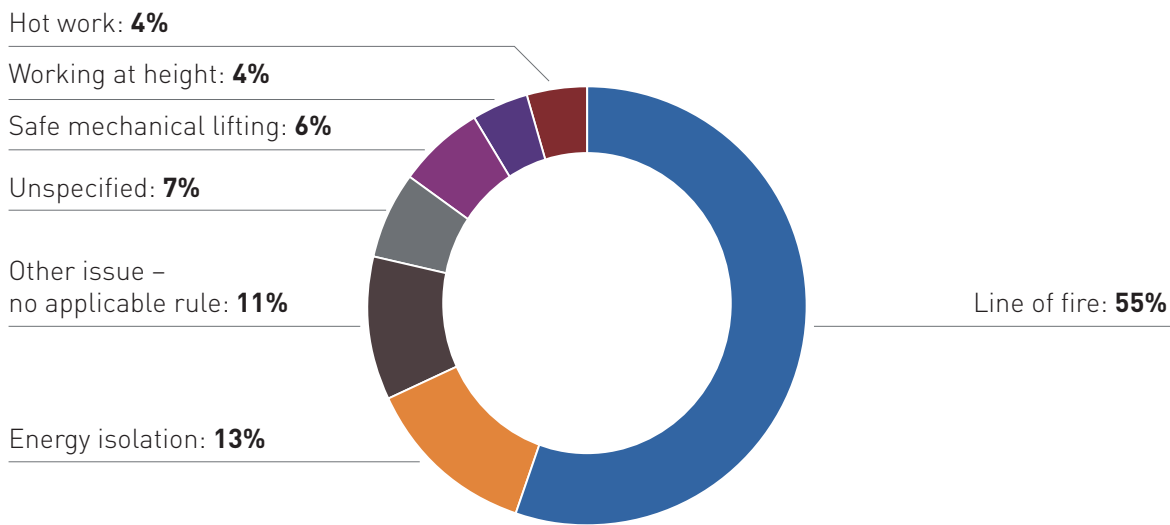

Figure 11: PI injuries by Life-Saving Rule 2023

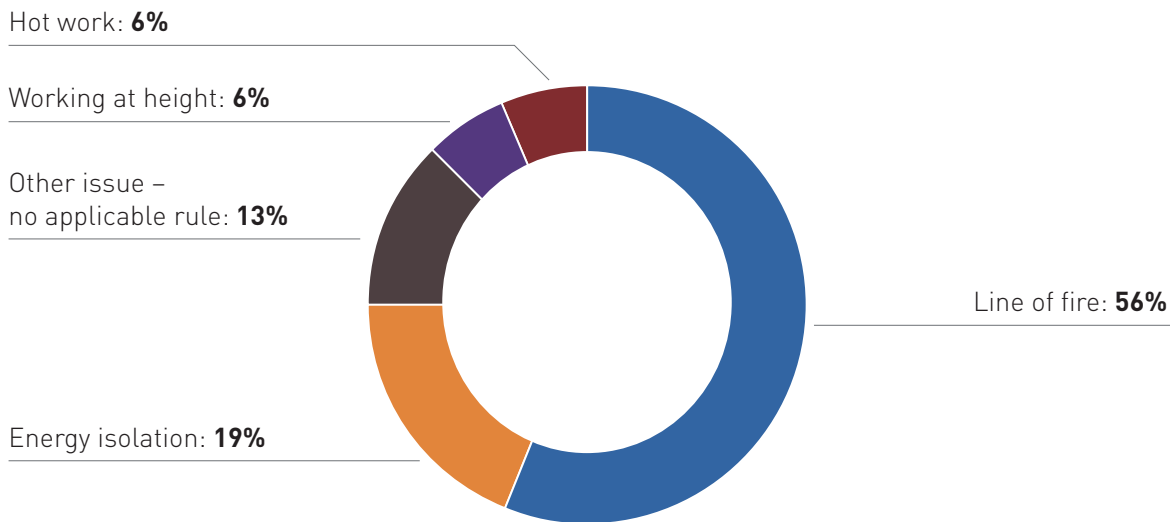

Figure 12: PI injuries by Life-Saving Rule 2022

Table 7: Number of fatalities and permanent impairment injuries by Life-Saving Rule 2022-2023

Life-Saving Rule	Fatalities		Permanent impairment injuries	
	2022	2023	2022	2023
Bypassing safety controls	0	3	0	0
Driving	3	5	0	0
Energy isolation	5	1	3	3
Hot work	3	0	1	1
Line of fire	11	2	9	17
Safe mechanical lifting	2	2	0	3
Work authorization	1	2	0	0
Working at height	1	2	1	1
Other issue – no applicable rule	3	10	2	3
Unspecified	0	0	0	3

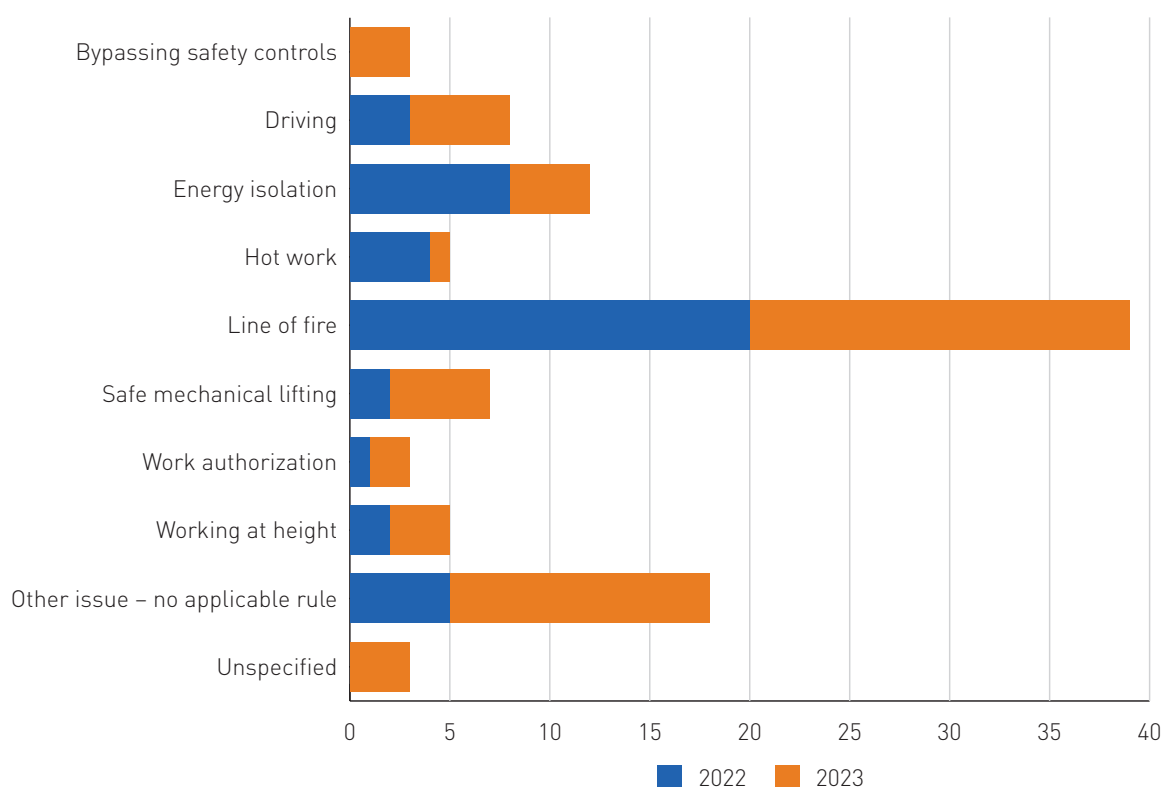

Figure 13: Fatalities and permanent impairment injuries by Life-Saving Rule 2022*-2023

* The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s - *Safety Performance Indicators 2022* because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.

For further Life-Saving Rules analysis related to fatalities refer to IOGP Report 2023s - *Safety Performance Indicators 2023*.

For more information on the IOGP Life-Saving Rules see IOGP Report 459 - *Life-Saving Rules* and <https://www.iogp.org/life-savingrules/>.

3.8 Body part injured

In 2023, 55% of reported PI affected the hand, wrist, or fingers (37% in 2022), 10% affected the arm/elbow/shoulder (13% in 2022), and 6% affected feet or ankles (19% in 2022).

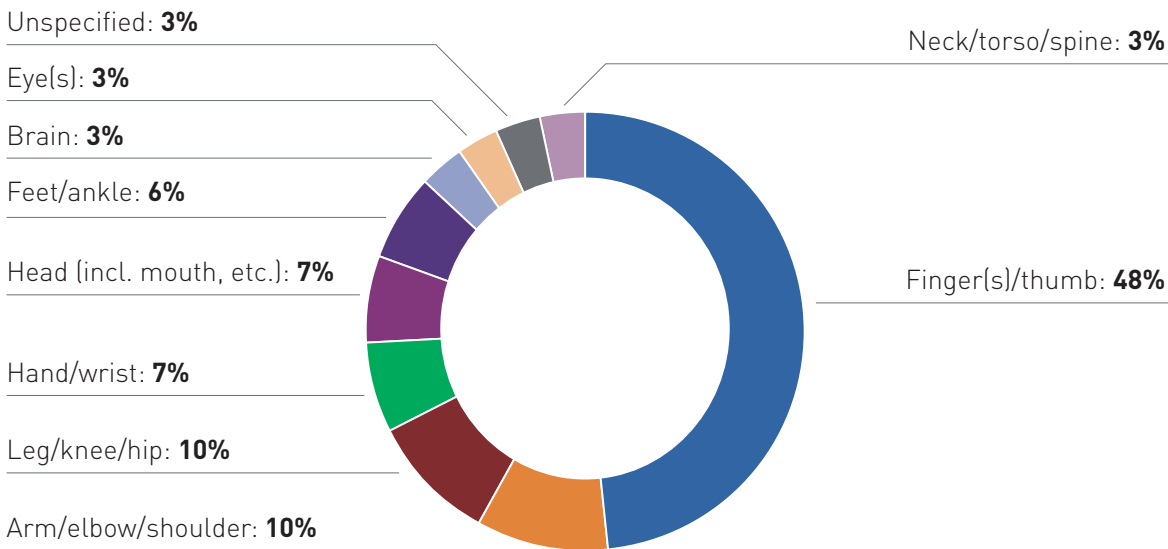

Figure 14: PI injuries by body part 2023

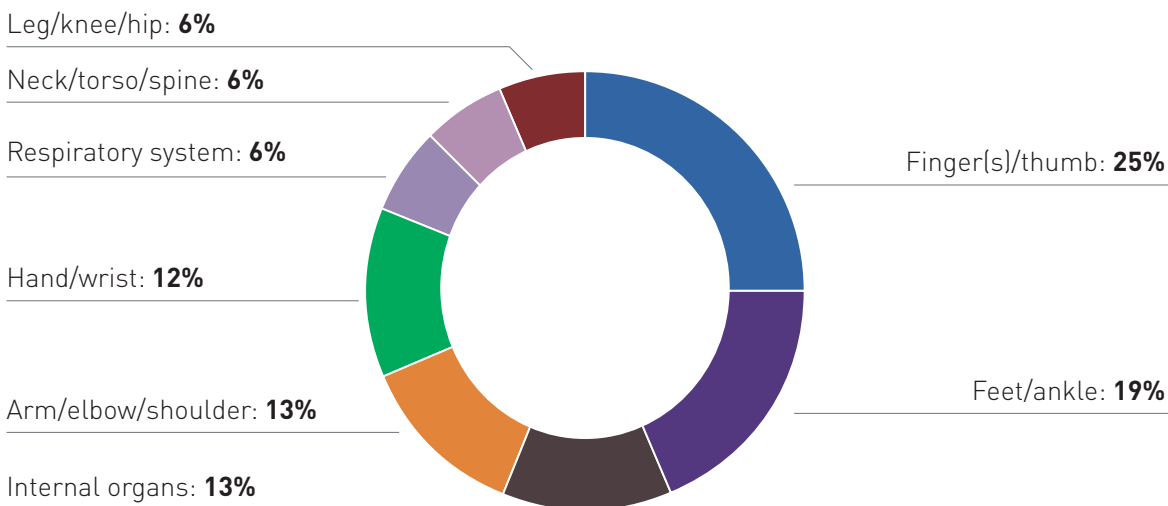

Figure 15: PI injuries by body part 2022

3.9 Nature of injury

In 2023, 39% of the PI were amputations with loss of bone inclusive of one or more joints (not able to be reattached) (31% in 2022), and 32% were fractures with ongoing impairment to mobility (38% in 2022).

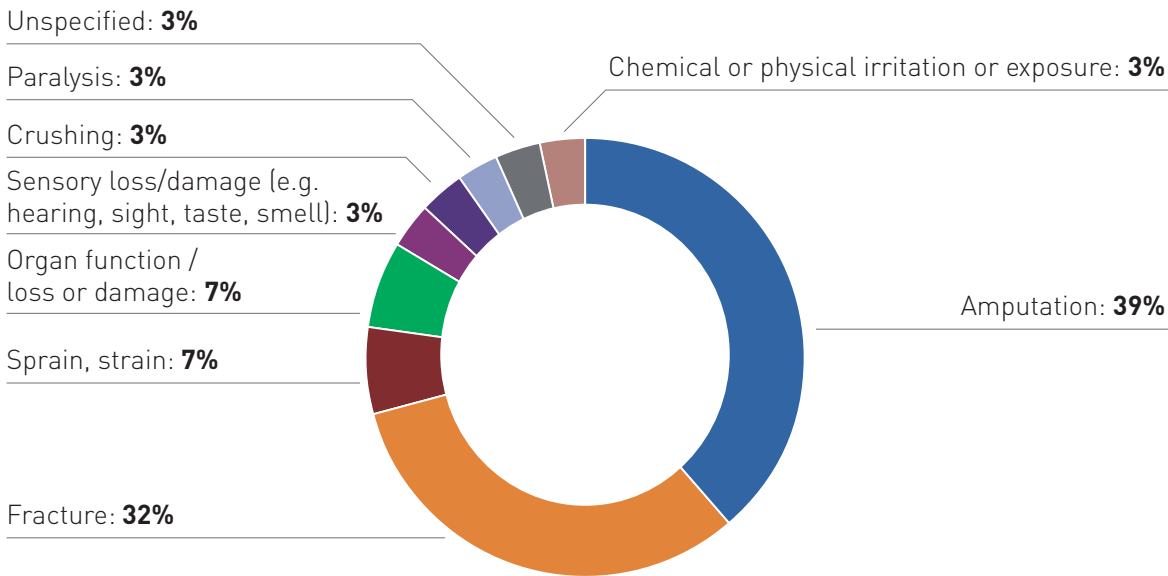

Figure 16: PI injuries by nature of injury 2023

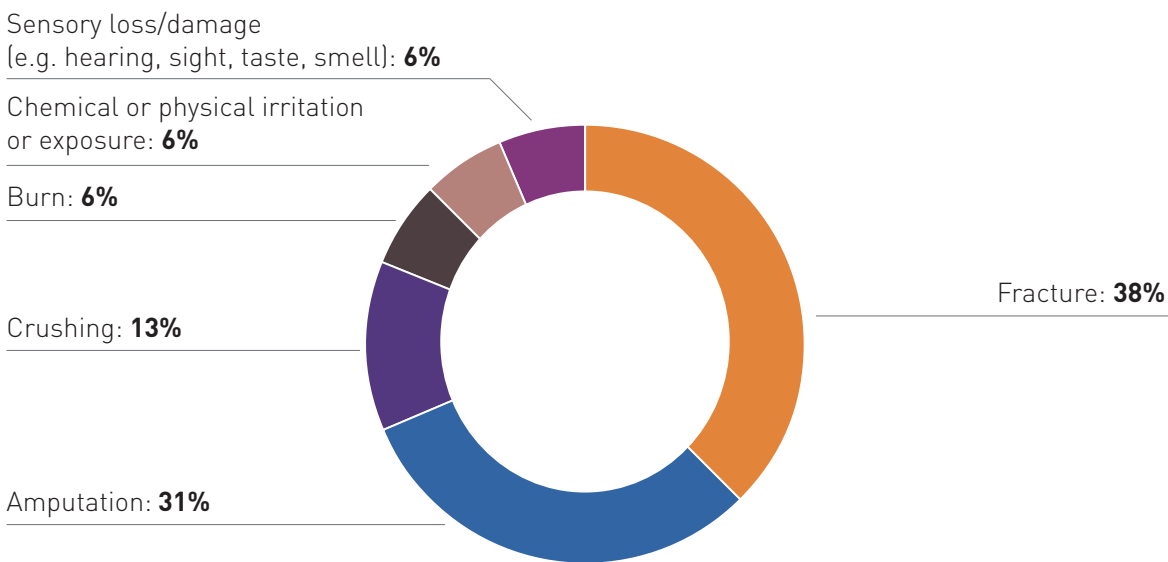

Figure 17: PI injuries by nature of injury 2022

4. Results by region

In 2022, 11 of the fatalities were in the Middle East region and 9 of the PI were in North America.

In 2023, 11 of the fatalities were in the Asia/Australasia region. 7 of the PI were in Europe and 7 were in the Middle East.

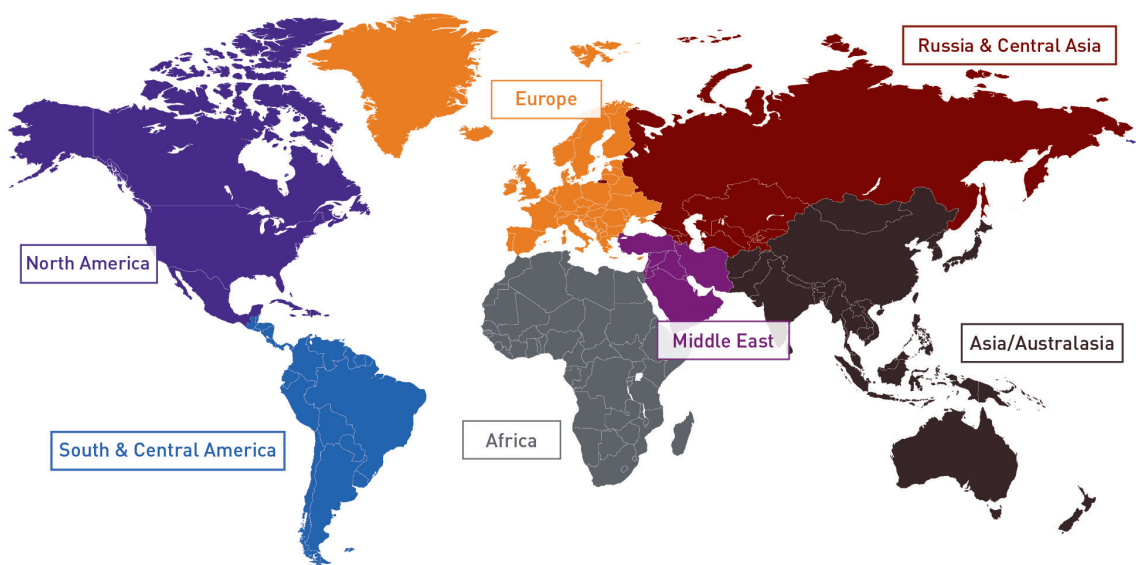

Figure 18: The 7 geographic regions

Actual FPI can also be used as a rate, as shown in Figures 19 and 20. IOGP has developed fatality and permanent impairment rate (FPIR) and permanent impairment rate (PIR) metrics using the same approach as fatal accident rate (FAR). Rates use 100 million work hours as the denominator, as the number of actual PI injuries reported is of the same order as fatalities, rather than 1 million work hours as used in LTIR or TRIR calculations.

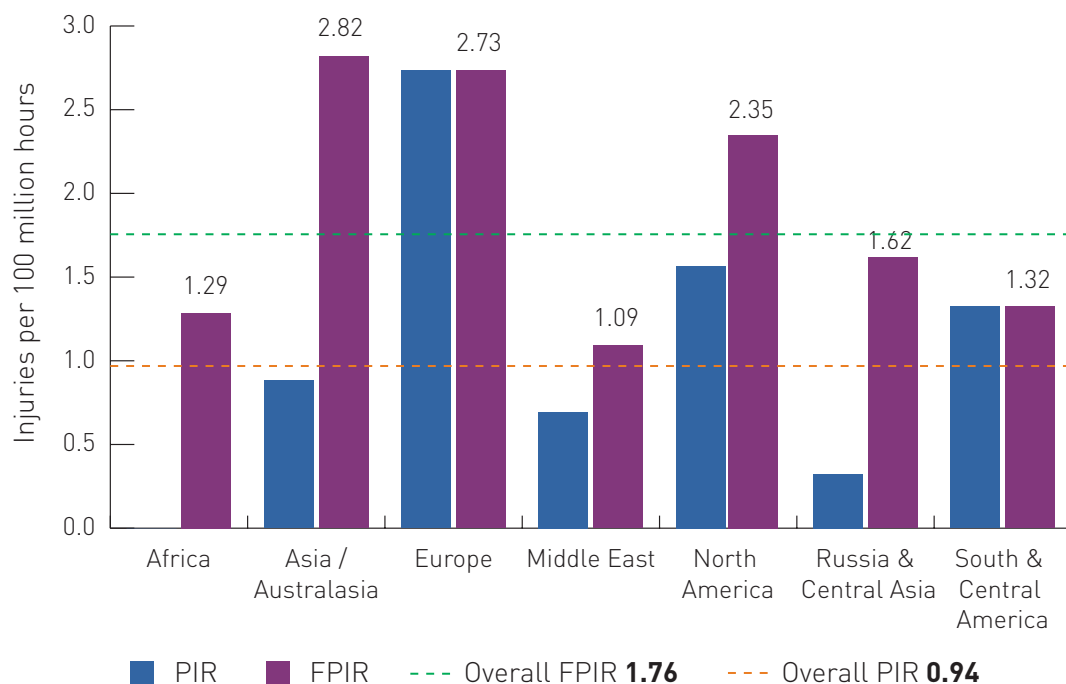

Figure 19: PI and FPI rates by region 2023

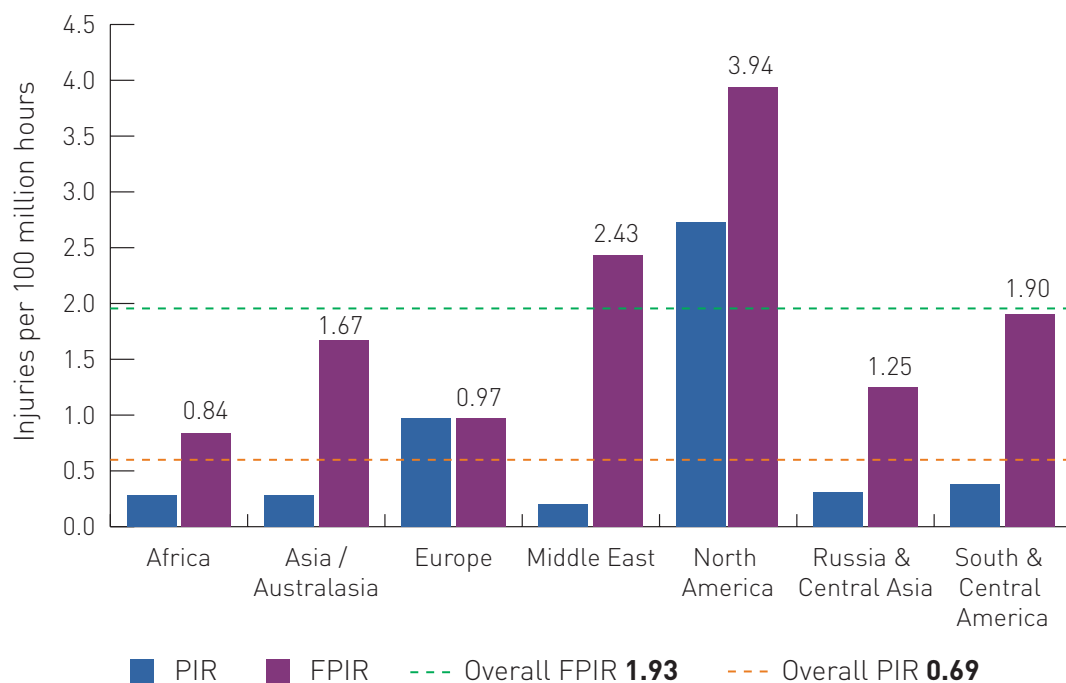

Figure 20: PI and FPI rates by region 2022*

* The 2022 information shown in this Report is a subset of the data in IOGP Report 2022s - *Safety Performance Indicators 2022* because not every company that reported fatalities reported permanent impairment data. Therefore, the two data sets should not be compared. 2023 PI data were reported by all companies.

5. Results by function

In 2023, 36% of reported PI were assigned to the drilling work function (44% in 2022), and 32% were assigned to the production function (31% in 2022).

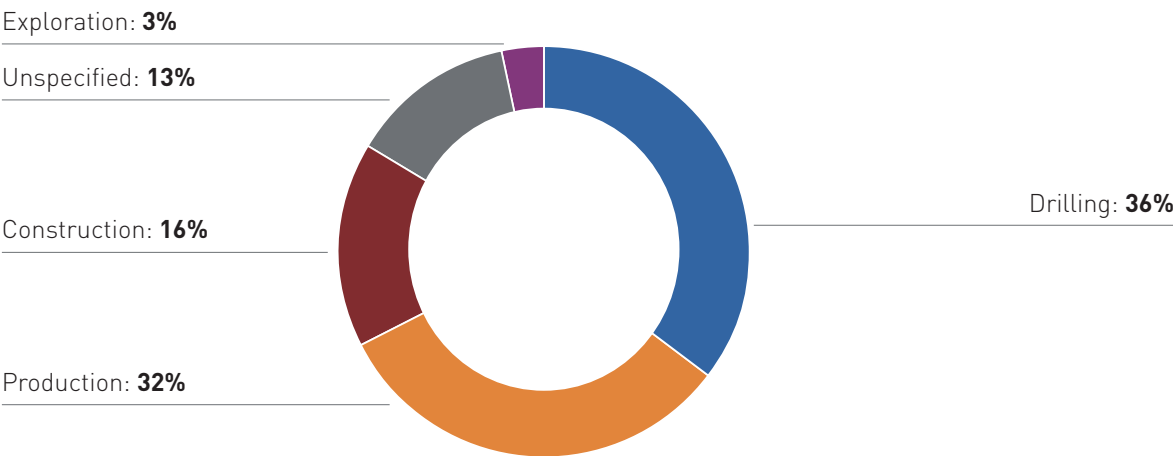

Figure 21: PI injuries by work function 2023

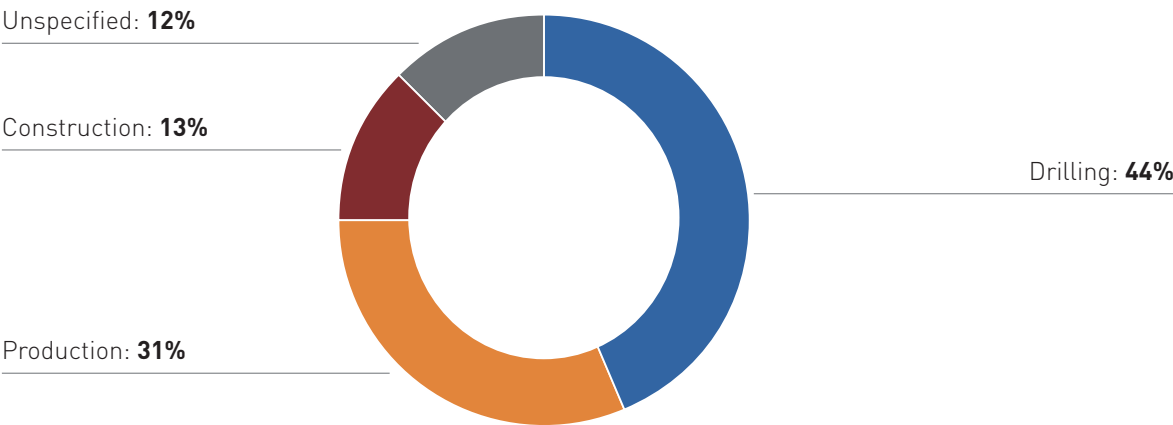

Figure 22: PI injuries by work function 2022

6. Results by company

This section compares the safety performance of individual companies with each other and with their performance in previous years.

For reasons of anonymity each of the companies that has contributed relevant data and is to be included in this analysis has been allocated a unique code letter (A to ZZ). These codes change every year in line with FPIR performance. 4 companies were excluded from the analysis of 2023 data because they did not report contractor data (2 companies were excluded in 2022). Results for 54 of the 58 participating companies are therefore shown in this section.

In Figures 23 and 24, the FPIR is presented for those companies that, with their contractors, reported more than 50 million work hours. 19 companies met this criterion in 2023, compared with 12 companies in 2022. Companies are presented in rank order of company-with-contractor FPIR. The analysis shows that:

- In 2023, 16 of the 19 companies with their contractors had a lower FPIR than the average for companies with contractors reporting more than 50 million work hours (1.46).
- 9 of the 19 companies suffered one or more fatalities.
- 10 of the 19 companies reported no fatalities.

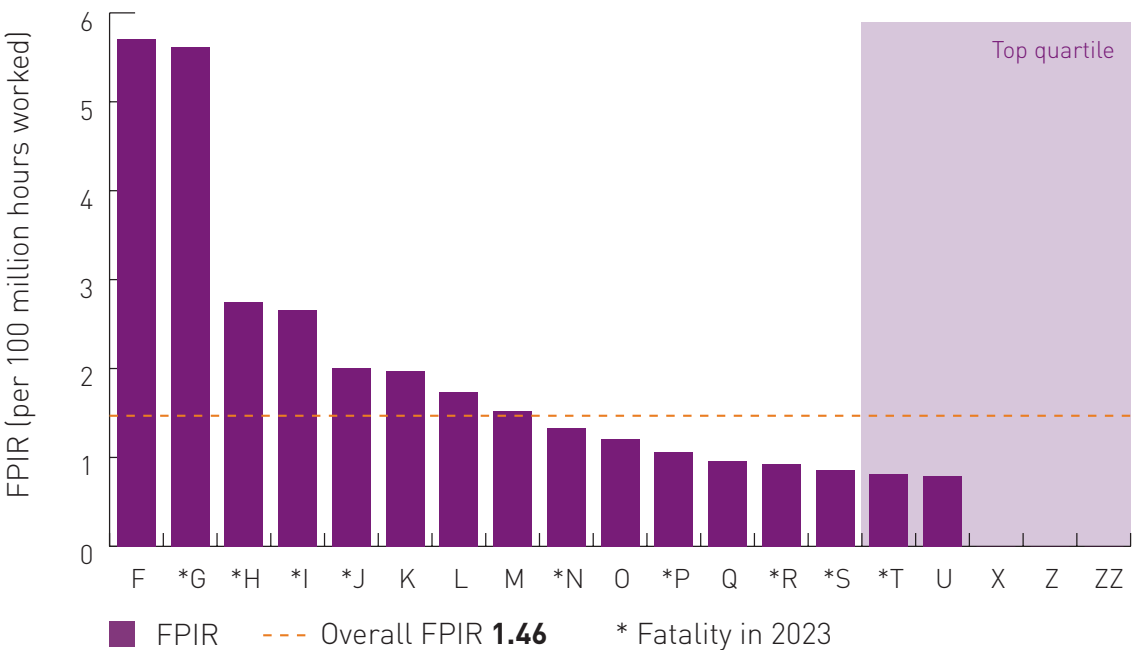

Figure 23: Fatality and permanent impairment rate (2023) – total workforce hours >50 million

- In 2022, 10 of the 12 companies with their contractors had a lower FPIR than the average for companies with contractors reporting more than 50 million work hours (2.05).
- 9 of the 12 companies suffered one or more fatalities.
- 3 of the 12 companies reported no fatalities.

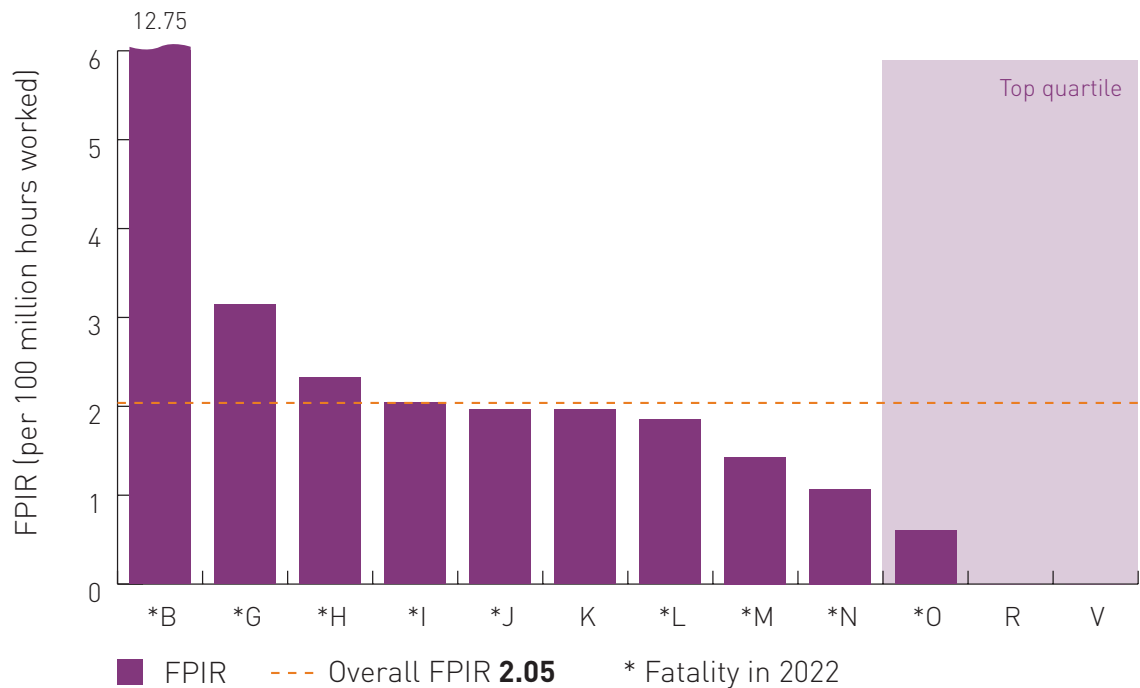

Figure 24: Fatality and permanent impairment rate (2022) – total workforce hours >50 million

The details of the data submitted for 2022 and 2023 are summarised in Table 1 and should be taken into consideration before conducting any comparative analysis.

Appendix A: Glossary of terms

Fatal accident rate (FAR)

The number of company/contractor fatalities per 100 million hours worked.

Fatality

A death as a result of a work-related incident. ‘Delayed’ deaths that occur within 180 days post incident are to be included if the death was a direct result of the incident (refer to the annual IOGP Safety Performance Indicators User Guide for the definition and further guidance on fatality, ‘delayed’ deaths, work related and injury).

Fatality and permanent injury rate (FPIR)

Number of company/contractor fatalities plus permanent impairment injuries per 100 million hours.

OSHA

Occupational Safety and Health Administration.

Permanent Impairment (PI)

Permanent impairment is defined as the outcome of a work-related injury from which the worker cannot or is not expected to return to their previous (pre-incident) whole person function as a result of an acute, single incident, resulting in any of the following:

- Permanent loss of body parts
- Permanent reduction of organ’s physiological function
- Permanent reduction in skin and musculoskeletal function
- Permanent reduction in psychological, social, or cognitive function

For reporting purposes, the classification is to be made within 180 days of the injury.

“Whole person function” relates to a person’s physiological / psychological status. Impairment is defined as either, or both:

- Loss of ability to return to the previous work role
- Loss of ability to perform the activities of daily living (ADL)

Permanent impairment rate (PIR)

Number of company/contractor permanent impairment injuries per 100 million hours worked.

See IOGP Report 2023s - *IOGP Safety performance indicators – 2023 data* for full glossary.

Appendix B: Data tables

Table B1: Summary of data 2022

Region	Data type	Operations	Hours worked (thousands)	Fatalities	PI injuries	PIR	FPIR	FAR
Africa	Company	Onshore	61,872	0	0	0.00	0.00	0.00

Table B3: Permanent impairments by category and subcategory

PI category	2022	2023	TOTAL
Permanent loss of body parts	6	11	17
Amputations with loss of bone inclusive of one or more joints (not able to be reattached)	5	11	16
Unspecified	1	0	1
Permanent reduction of organ function	2	3	5
Eye injury with loss of vision	0	1	1
Loss of hearing or persistent tinnitus (ear ringing) post injury after exposure to a blast	1	0	1
Loss of sense smell that creates a safety concern or significant personal impact	0	1	1
Lung injury, including inhalation, with impaired exertion tolerance/measurable loss of function	1	0	1
Spinal injury requiring use of wheelchair	0	1	1
Permanent reduction in skin and/or musculoskeletal function	8	13	21
Deep burns with scarring or skin grafts that impair body movement or other function	1	0	1
Fracture with ongoing impairment to mobility	6	7	13
Tendon/ligament tear with ongoing pain and/or inadequate joint range of movement for normal work or general function	0	2	2
Traumatic soft tissue injury to shoulder/knee/elbow with ongoing pain and/or inadequate joint range of movement	0	1	1
Other	0	2	2
Unspecified	1	1	2
Permanent reduction in psychological, social or cognitive function	0	2	2
Brain injury with ongoing impact to emotional regulation, speech, memory, or other cognitive dysfunction	0	1	1
Unspecified	0	1	1
Unspecified	0	2	2
Unspecified	0	2	2

Brain	0	1
Eye(s)	0	1
Feet/ankle	0	2
Finger(s)/thumb	0	15
Hand/wrist	0	2
Head (incl. mouth, etc.)	6	2
Internal organs	7	0
Leg/knee/hip	1	3
Neck/torso/spine	4	1
Respiratory system	7	0
Unspecified	2	1
Note: for categories not listed, values are zero. Refer to IOGP Report 2023su - <i>Safety Performance Indicators User Guide</i> , for a full list of options.		

Table B8: Fatalities and permanent impairment injuries by nature of injury

Nature of injury	Fatalities	Permanent impairment injuries
2022		
Amputation	1	5
Burn	3	1
Chemical or physical irritation or exposure	0	1
Crushing	12	2
Cut, Puncture, Scrape	2	0
Fracture	1	6
Inhalation, poisoning, intoxication, asphyxiation, drowning	2	0
Loss of consciousness	1	0
Major/multiple system trauma	1	0
Sensory loss/damage (e.g., hearing, sight, taste, smell)	0	1
Shot	1	0
Unspecified	5	0
2023		
Amputation	0	12
Burn	5	0
Chemical or physical irritation or exposure	0	1
Crushing	3	1
Cut, Puncture, Scrape	2	0
Electric shock	1	0
Fracture	0	10
Inhalation, poisoning, intoxication, asphyxiation, drowning	6	0
Major/multiple system trauma	1	0
Organ function/loss or damage	1	2
Paralysis	0	1
Sensory loss/damage (e.g. hearing, sight, taste, smell)	0	1
Sprain, strain	0	2
Unspecified	8	1

Table B9: Fatalities and permanent impairment injuries by work function

Work function	Fatalities*	Permanent impairment injuries
2022		
Exploration	0	0
Drilling	8	7
Production	9	5
Construction	5	2
Unspecified	7	2
2023		
Exploration	0	1
Drilling	2	11
Production	13	10
Construction	5	5
Unspecified	7	4
*The work functions associated with fatalities have been updated and are more detailed in this analysis so will not match information previously published in IOGP Report 2023s. Therefore, the two Reports should not be compared.
