

DATA SERIES

Safety performance indicators – aviation accidents – 2024 data

EXECUTIVE SUMMARY

About IOGP Safety Data

The International Association of Oil and Gas Producers (IOGP) has been collecting safety incident data from its Member Companies globally since 1985. The data collected are entered into the IOGP safety database, which is the largest database of safety performance in the exploration and production (E&P) industry.

The principal purpose of the data collection and analysis is to record the global safety performance of the contributing IOGP Member Companies on an annual basis. The submission of data is voluntary and is not mandated by IOGP Membership. The annual reports provide trend analysis, benchmarking, and the identification of areas and activities on which efforts should be focused to bring about the greatest improvements in performance.

IOGP Aviation data

IOGP Report 2024a – *Aviation accidents – 2024 data*, presents the safety performance of the aviation industry¹ involved in both upstream and downstream operations reported by participating IOGP Member Companies for 2013-2024. It is published as part of the IOGP data series.²

The data presented have been collected specifically from Member Companies of IOGP.

The principal purposes of this Report are to record the safety performance of helicopter and aeroplane operations of the participating Member Companies in the years 2013-2024, and to provide data that can be used by IOGP Member Companies and others to benchmark their performance.

The key indicators for analysis of aviation operations and safety performance are:

- numbers of fatalities
- accidents recorded

- hours flown
- passengers carried
- flight stages performed

This Report presents overall (worldwide) and regional results against these indicators, and the rates of exposure by aircraft activity performed, and type of aircraft flown.

The Aviation Subcommittee also monitors publicly available accidents from non-IOGP companies in the oil and gas industry to maximize learning opportunities.

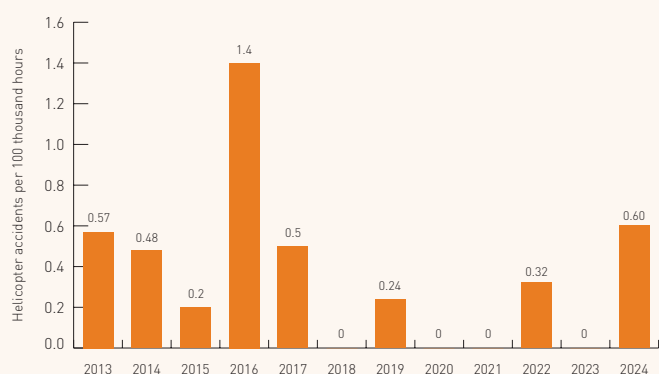

In 2024, participating IOGP Member Companies reported 2 helicopter accidents; one was a total loss offshore Norway with 1 fatality, and the second, offshore Nigeria, resulting in minor injuries to passengers and aircraft.

¹ This report represents accidents and operational data submitted by participating Member Companies only. It is not intended to represent the worldwide oil and gas industry.

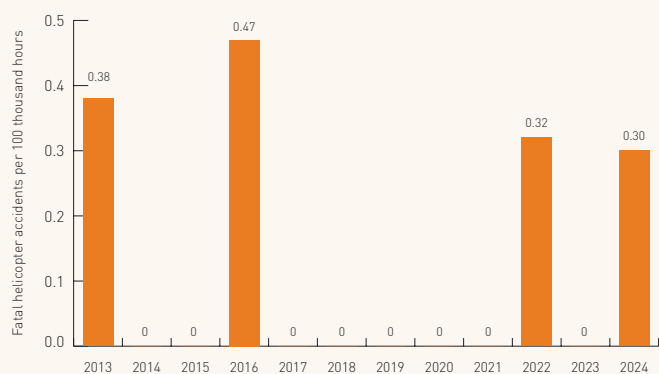

² IOGP's Aviation Subcommittee has been collecting data since 1994, but previously published Reports represent worldwide data gathered from other industry sources and do not specifically represent data reported by IOGP Member Companies.

Helicopter accidents

Helicopter accidents per 100 thousand
hours 2013-2024

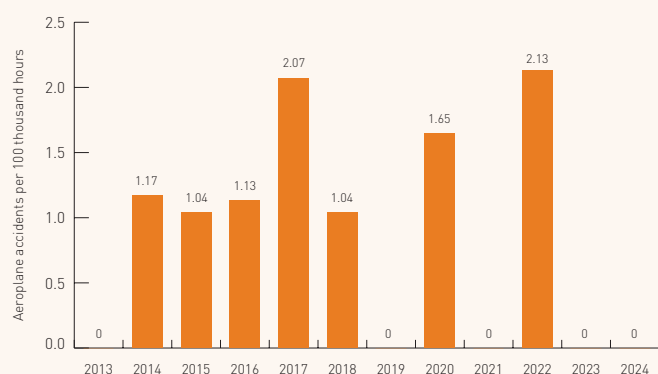

Fatal helicopter accidents per
100 thousand hours 2013-2024

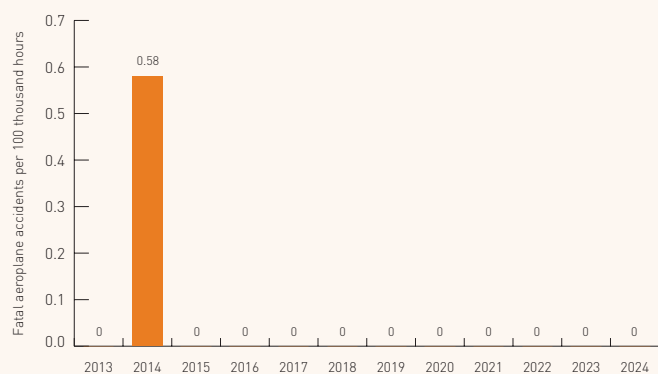

Aeroplane accidents

Aeroplane accidents per 100 thousand
hours 2013-2024

Fatal aeroplane accidents per
100 thousand hours 2013-2024
