Introduction

This Report presents the safety performance of the aviation industry¹ involved in both upstream and downstream operations reported by participating IOGP Member Companies for 2013-2025. It is published as part of the IOGP data series.²

The data presented have been collected specifically from Member Companies of the International Association of Oil and Gas Producers (IOGP).

The principal purposes of this Report are to record the safety performance of helicopter and aeroplane operations of the participating Member Companies in the years 2013-2025, and to provide data that can be used by IOGP Member Companies and others to benchmark their performance.

The key indicators for analysis of aviation operations and safety performance are:

- numbers of fatalities
- accidents recorded
- hours flown
- passengers carried
- flight stages performed

This Report presents overall (worldwide) and regional results against these indicators, and the rates of exposure by aircraft activity performed and type of aircraft flown.

Support from the IOGP Membership for this safety and operations review is not only appreciated, but also vital in establishing a meaningful Report. Continued support is encouraged for the future.

It is anticipated that by sharing this information with all operators, improved Member participation in the annual review will be encouraged, and safety initiatives can then be focused on reducing accidents where trends are apparent.

The Aviation Subcommittee also monitors publicly available accidents from non-IOGP companies in the oil and gas industry to maximize learning opportunities.

Data series

Other IOGP Data Reports published annually include:

- Safety Performance Indicators.
- Environmental Performance Indicators.
- Health leading performance indicators.
- Safety performance indicators – Motor Vehicle Crash Data.
- Safety performance indicators – Process safety events.

These are available from IOGP's data website at <https://data.iogp.org/>.

¹ This Report represents accidents and operational data submitted by participating Member Companies only. It is not intended to represent the worldwide oil industry.

² IOGP's Aviation Subcommittee has been collecting data since 1994, but previously published Reports represent worldwide data gathered from other industry sources and do not specifically represent data reported by IOGP Member Companies.

Database dimensions

The Report is based on submissions from 29 participating IOGP Member Companies and covers operations in 51 countries for 2025.

Figure 1 shows the number of participating companies and countries represented for each reporting year.

Countries and companies that are subject to international sanctions are not featured in this Report for 2022-2025 data.

Figure 1: Participation

Seven regions have been defined to show the data from a geographical perspective; these are shown in Figure 2.

Figure 2: The 7 geographic regions

Figures 3 and 4 show the level of activity reported by participating companies for helicopter and aeroplane operations, respectively.

See Appendix B Glossary of terms for definitions.

Figure 3: Helicopter fleet (see Table A.11)

Figure 4: Aeroplane fleet (see Table A.27)

1. Helicopter

1.1 Helicopter accident rates

Figure 5: Helicopter accidents per 100 thousand hours 2013-2025 (see Tables A.1 and A.2)

Figure 6: Fatal helicopter accidents per 100 thousand hours 2013-2025 (see Tables A.1 and A.2)

1.2 Helicopter accidents by helicopter type

The helicopter type categories were changed with the collection of 2016 data, so the information in this section is limited to the years 2016-2025.

Figure 7: Number of accidents by helicopter type 2016-2025 (see Table A.1)

Figure 8: Number of fatalities and injuries by helicopter type 2016-2025 (see Table A.1)

Note: a correction was made to helicopter type assigned for 2016, compared with previously published figures, as shown in Figures 7 and 8 and Table A1.

1.3 Helicopter accidents by region

Figure 9: Helicopter accidents by region 2013-2025 (see Tables A.3-A.9)

1.4 Helicopter operations by region – offshore

Figure 10: Helicopters 2025

Figure 11: Helicopters 2013-2025

Figure 12: Helicopter hours flown 2025

Figure 13: Helicopter hours flown 2013-2025

See Table A.14.

1.5 Helicopter operations rates

Figure 14: Helicopter operations rates 2013-2025 (see Table A.13)

Figure 15: Helicopter operations rates 2013-2025 by activity - hours per aircraft (see Table A.13)

Note: Where values are not shown, this indicates that no data were reported, e.g., in the Seismic and Geophysical activities.

2. Aeroplane

2.1 Aeroplane accident rates

Figure 16: Aeroplane accidents per 100 thousand hours 2013-2025 (see Table A.17)

Figure 17: Fatal aeroplane accidents per 100 thousand hours 2013-2025 (see Table A.17)

2.2 Aeroplane accidents by aeroplane type

Figure 18: Number of accidents by aeroplane type 2013-2025 (see Table A.17)

2.3 Aeroplane accidents by region

Figure 19: Aeroplane accidents by region 2013-2025 (see Tables A.19-A.25)

2.4 Aeroplane operations by region

Figure 20: Aeroplanes 2025

Figure 21: Aeroplanes 2013-2025

Figure 22: Aeroplane hours flown 2025

Figure 23: Aeroplane hours flown 2013-2025

See Table A.32.

2.5 Aeroplane operations rates

Figure 24: Aeroplane operations rates 2013-2025 (see Table A.31)

Figure 25: Aeroplane operations rates 2013-2025 by activity - hours per aircraft (see Table A.31)

Appendix A: Data tables

A.1 Helicopter

Note that the helicopter type categories were changed with the collection of 2016 data.

A.1.1 Overall helicopter accidents

Table A.1: Overall helicopter accidents- by helicopter type

A.1.3 Helicopter accident reports

Table A.10: Helicopter accident reports – IOGP Member companies

Year	Region	Country	Date of accident	Activity	Type	Crew	Passengers carried	Passenger non-fatal injuries	Passenger fatalities	Crew non-fatal injuries	Crew fatalities	Damage	Narrative
2025	Asia / Australasia	India	18 November 2025	Offshore	Part 29	2	6	2	0	0	0	Major	During short finals on approach from an offshore rig to the airport, the helicopter (Bell 412) suffered a bird strike. The RH windshield was shattered injuring two passengers due to glass shard debris. One of the passengers suffered minor injuries on the hand and had local first aid treatment. The other passenger had to undergo stitches on upper lip for a cut due to glass shard.
2025	South & Central America	Peru	29 October 2025	Unspecified	Russian	3	0	0	0	0	3	Total loss	A Mil Mi-171 helicopter was performing onshore external cargo (long line) activities at a gas plant logistics area, when it suddenly loss directional control, fell into drop zone and caught fire. All three crew members on board perished. Preliminary report published by CIAA.
2024	Africa	Nigeria	20 January 2024	Offshore	Part 29	2	0	0	0	0	0	Minor	While in cruise, the helicopter experienced a flight upset leading to unusual flight attitudes. This loss of control resulted in the following: • the detachment of three of the helicopter windows • minor injury to three of the passengers and minor damage to the aircraft Preliminary report published by NISB
2024	Europe	Norway	28 February 2024	Offshore	Part 29	6	0	0	0	0	1	Total loss	Offshore SAR training, hoisting from sea during darkness. Preliminary report published by NSIA.
2022	South & Central America	Brazil	16 March 2022	Offshore	Part 29	2	11	5	0	0	1	Total loss	Inflight loss of control on the final approach to the helideck of an NUI. After the impact, the helicopter assumed an inverted position. All occupants, except the Captain, successfully escaped the submerged helicopter. Final investigation report published by CENIPA

Year	Region	Country	Date of accident	Activity	Type	Crew	Passengers carried	Passenger non-fatal injuries	Passenger fatalities	Crew non-fatal injuries	Crew fatalities	Damage	Narrative
2019	Africa	Egypt	11 October 2019	Offshore	Part 29	2	3	3	0	2	0	Total loss	While en route from an offshore installation to Port Said, a Bell 412 helicopter, operated on behalf of an oil field service company, performed an emergency landing (ditching) into the Mediterranean Sea under unknown circumstances. Twenty minutes after take-off from a crane ship, the aircraft had been noted to be in a 'frozen state' (no variation in altitude and speed equal to 22kts/40km/h) on the flight tracking system. Another Bell 412 helicopter heading on the same route tried to establish communication, but there was no response. Minutes later a third aircraft (AW139) that was in the vicinity joined the effort but when failure to establish communication persisted, an emergency case was declared, the emergency plan was activated in Cairo headquarters, and an emergency team assembled. A second AW139 was dispatched to help in the research and after a few minutes, the crew was finally able to observe an oil spill on the water and beside it there were 5 people (2 pilots and 3 passengers) floating by means of life vests in water. After 40 minutes of searching, the company's pilots were able to locate the crew and all passengers wearing the helicopter's life jackets 65 miles north of Port Said. Immediately, the crew made a general call with new coordinates of the located persons in water. Preliminary report published by EAAID.
2017	South & Central America	Brazil	01 March 2017	Offshore	Part 29	2	8	1	0	0	0	Total loss	After decision to land on the helideck of an FPSO, the helicopter touched the helideck with the right wheel first and then rolled over, before coming to a stop. Final investigation report published by CENIPA.

Year	Region	Country	Date of accident	Activity	Type	Crew	Passengers carried	Passenger non-fatal injuries	Passenger fatalities	Crew non-fatal injuries	Crew fatalities	Damage	Narrative
2017	South & Central America	Brazil	15 April 2017	Offshore	Part 29	3	18	0	0	0	0	Major	During the entry over the helideck of a MODU, the helicopter tail rotor impacted an antenna outside of both the Obstacle Free Sector (OFS) and Limited Obstacle Sector (LOS). The flight crew maintained partial control and managed to land heavily on the helideck. Final investigation report published by CENIPA.
2016	Africa	Angola	26 September 2016	Offshore	Part 29	1	5	0	5	0	1	Total loss	Crashed into water during Day VMC crew change - investigation in progress. Final investigation report published by GPIAA.
2016	Africa	Nigeria	03 February 2016	Offshore	Part 29	2	9	2	0	0	0	Major	The pilots suspected a malfunction within the flight control system and elected to ditch offshore in a controlled manner. The crew and passengers exited the helicopter into the life raft and were subsequently rescued. The helicopter rolled in the water resulting in total salt-water immersion. Final investigation report published by NSIB and AIB.
2016	Europe	Norway	29 April 2016	Offshore	Part 29	2	11	0	11	0	2	Total loss	The Main Rotor Head (MRH) and mast suddenly detached from an Airbus Helicopters EC 225 LP en route to Bergen Airport Flesland. The helicopter impacted on a small island east of Turøy. All 13 people on board perished. Final investigation report published by NSIA
2016	Europe	Norway	05 July 2016	Offshore	Part 29	2	14	0	0	0	0	Major	While taxiing to a helicopter stand on apron 7, the helicopter's main rotor blades hit the side of a parked truck. All four main rotor blades were damaged. Two people, staying inside and by the truck, were lightly injured. Final investigation report published by NSIA.
2016	Europe	UK	28 December 2016	Offshore	Part 29	2	9	0	0	0	0	Minor	Failure of tail rotor servo bearing during landing on helideck. Final investigation report published by AAIB.

Year	Region	Country	Date of accident	Activity	Type	Crew	Passengers carried	Passenger non-fatal injuries	Passenger fatalities	Crew non-fatal injuries	Crew fatalities	Damage	Narrative
2016	North America	USA	07 April 2016	Offshore	Part 29	2	7	0	0	0	0	Major	During a business flight over the Gulf of Mexico, the crew felt a slight vibration of the tail rotor with no other anomalies noted and landed the helicopter uneventfully at their planned destination. A postflight inspection revealed that one of the tail rotor blade erosion shield extensions, also known as a lightning strip (LS), was missing and that only its side tabs remained attached to the blade. One of the main rotor blade tips sustained substantial damage when the LS separated from the tail rotor blade and impacted the bottom of the main rotor blade. Final investigation report published by NTSB.
2015	Asia/ Australasia	Indonesia	21 March 2015	Offshore	Medium Twin	3	5	5	0	2	0	Major	The helicopter crashed in a mangrove swamp. The two pilots received serious injuries, and five passengers received minor injuries. The fuselage came to rest inverted. Contracted on a mission to inspect pipelines in the GTS-4 (CPU/Central Processing Unit) Anggana area, operating at 500ft. The investigators found that loosening of the jam nut of the forward main rotor servo push rod was undetected during the daily operation and led to the rod end bearing was not engaged properly against the push rod. The condition of rod end bearing did not properly engage against the push rod resulted in the asymmetric deformation of the internal thread in the push rod during the operation. Continuous operation with such conditions led to deterioration of the engagement of the forward push rod and the rod end bearing which subsequently the rod end bearing separated from the push rod. This resulted in the un-commanded servo movement to the main rotor control that led the helicopter enter un-commanded altitude an uncontrollable main rotor and loss of control of the helicopter. Final investigation report published by NTSC.

Year	Region	Country	Date of accident	Activity	Type	Crew	Passengers carried	Passenger non-fatal injuries	Passenger fatalities	Crew non-fatal injuries	Crew fatalities	Damage	Narrative
2014	Asia/ Australasia	Indonesia	12 May 2014	Offshore	Medium Twin	2	12	0	0	0	0	Major	Helicopter operated in less than VFR weather. While approaching an offshore platform, the helicopter slowed, entered a ring vortex state, and settled into the water. The helicopter lifted from the water and flew 7 NM to land at a different platform.
2014	North America	USA	05 January 2014	Offshore	Part 29	1	1	0	0	0	0	Minor	Tail rotor strike while landing offshore. The helicopter tail rotor struck a handrail while landing offshore due to human factors. Final investigation report published by NTSB.
2014	South & Central America	Brazil	17 December 2014	Offshore	Part 29	3	17	0	0	0	0	Major	While hovering over the helideck of a platform, the crew heard a strong popping noise, followed by vibration and instability, resulting in a hard landing, with major damage to the lower structure and a bent down pylon. Final investigation report published by CENIPA.
2013	Europe	UK	23 August 2013	Offshore	Heavy Twin	2	16	12	4	2	0	Total loss	The final report concluded that the non-precision approach was not monitored effectively during the late stage of the procedure. It allowed the helicopter to enter a critical low energy state from which recovery was not possible (vortex). It resulted in 4 fatalities and 4 serious injuries.
2013	South & Central America	Brazil	27 March 2013	Offshore	Part 29	3	0	0	0	0	0	Total loss	During a cargo transport flight to a platform, the crew heard a noise, followed by a strong vibration, leading to a ditching. The helicopter assuming an inverted position, with the floats inflated. The 3 crew successfully escaped the submerged helicopter. Final investigation report published by CENIPA
2013	South & Central America	Peru	07 April 2013	Other oil industry support	Russian	4	9	0	9	0	4	Total loss	Crashed near the base of oil company. Sudden loss of directional control and helicopter flight disintegration, due to loss of tail rotor control due to the interference of cargo net inside the aircraft. Main rotor blades severed tail boom. Debris found on trees and distributed in an area of 80x365 feet. Final investigation report published by CIAA.

Note that the helicopter type categories were changed with the collection of 2016 data.

A.2.3 Aeroplane accident reports

Table A.26: Aeroplane accident reports

Year	Region	Country	Date of Accident	Activity	Type	Crew	Passengers	Passenger Non-Fatal Injuries	Passenger Fatalities	Crew Non-Fatal Injuries	Crew Fatalities	Damage	Narrative
2025	Asia / Australasia	Papua New Guinea	06 February 2025	Passenger movement	Twin Turboprop	2	8	8	0	2	0	Major	A DHC-6-400 Twin Otter P2-AXL, conducted an IFR charter flight from the airstrip to the airport. During the landing roll, the aircraft experienced a loss of directional control, veered off the runway and impacted a drainage ditch that runs along the left side of the runway. The aircraft sustained substantial damage to the nose section and nose landing gear assembly on impact.
2022	Africa	Congo	19 September 2022	Passenger movement	Twin Turboprop	3	16	0	0	0	0	Major	A BEECH 1900C suffered an accident just after it landed at the airport. After touchdown, during the rolling phase, the right-hand landing gear collapsed, resulting in contact of the airframe, the engine cowlings, the propeller, and the wing with the ground. This flight was carried out under a joint charter contract between 3 IOGP Aviation Subcommittee members.
2020	North America	USA	21 May 2020	Pipeline and other surveillance	Single Piston	2	0	0	0	0	0	Minor	A Cessna 172S struck a threshold light at around 2:26 Central Time during its sole planned landing for the day. The flight was crewed by a Captain and an Observer. No one was injured during the landing, but the horizontal stabilizer received significant damage.
2018	Africa	Nigeria	25 January 2018	Passenger movement	Jet	3	4	0	0	0	0	Total loss	The right main landing gear collapsed and tore away. Aircraft came to rest on the side of the runway. The NAIB has the lead in the investigation. Although still awaiting the outcome of the technical investigation by Gulfstream and the FDR data to make useful conclusions.

Year	Region	Country	Date of Accident	Activity	Type	Crew	Passengers	Passenger Non-Fatal Injuries	Passenger Fatalities	Crew Non-Fatal Injuries	Crew Fatalities	Damage	Narrative
2017	North America	USA	26 February 2017	Passenger movement	Twin Turboprop	2	4	4	0	0	0	Major	Pilot of Cessna Conquest (CE441) conducting a passenger carry flight attempted take-off with a quartering tailwind. As Pilot advanced power to engines the aircraft drifted from the runway centerline. Within a few seconds the Pilot realized the drift and applied reverse thrust and braking to decelerate the aircraft in an attempt to abort the take-off. The right main landing gear made contact with a snowdrift. The aircraft turned 90 degrees from the take-off direction and came to rest on packed snow on the runway edge. Damage occurred to the engine cowlings and propellers. No injuries occurred during this event.
2017	South & Central America	Brazil	21 March 2017	Passenger movement	Twin Turboprop	4	0	0	0	0	0	Major	During the landing, after the touchdown, the aircraft presented asymmetry in the reverse system, causing its exit from the left side of the runway. The aircraft had substantial damage. All occupants left unharmed. Final investigation report published by CENIPA.
2016	North America	USA	29 October 2016	Pipeline and other surveillance	Single Piston	1	1	0	0	0	0	Major	Impacted telephone line while patrolling production field for leaks - resulted in emergency landing.

Year	Region	Country	Date of Accident	Activity	Type	Crew	Passengers	Passenger Non-Fatal Injuries	Passenger Fatalities	Crew Non-Fatal Injuries	Crew Fatalities	Damage	Narrative
2015	North America	USA	06 September 2015	Pipeline and other surveillance	Twin Turboprop	3	0	0	0	2	0	Total loss	Following a straight in landing approach to runway 05, as the aircraft flared approximately 30 feet above the runway threshold, it experienced what was reported as “a malfunction on the right engine” (Note: This was subsequently clarified as a failure of the right engine or propeller control system). The malfunction caused the aircraft to unexpectedly yaw to the right, with a corresponding increase in drag, which caused the nose to abruptly drop. The aircraft could not be controlled with the flight controls and after briefly touching down, departed the runway impacting the tree line on the right side of the runway. The PIC sustained head lacerations and was taken to the hospital, treated and released. The SIC sustained compound fractures of his left leg. He was taken to the hospital and admitted. The camera operator was checked out on site by Emergency Medical Services (EMS) personnel and released. Final investigation report published by NTSB.
2014	Europe	France	20 October 2014	Passenger movement	Jet	3	1	0	1	0	3	Total loss	Collision with snowplough during take-off. Final investigation report published by IAC.
2014	South & Central America	Brazil	30 May 2014	Passenger movement	Twin Turboprop	3	45	0	0	0	0	Major	ATR 42-500. In the race for take-off the aircraft hit a wild animal. Final investigation report published by CENIPA.

* data are only included where both flight hours and flight stages are reported

** data are only included where both flight hours and number of helicopters are reported

*** data are only included where both flight stages and number of helicopters are reported

**** data are only included where both number of passengers and number of helicopters are reported

Appendix B: Glossary of terms

Acc. 100k Flt Stages

The number of accidents per 100,000 flight stages:

- $\text{Accidents}/(\text{flight stages}/100,000)$

Acc. 100k Hours

The number of accidents (fatal + non-fatal) per 100,000 flight hours:

- $\text{Accidents}/(\text{hours}/100,000)$

Accident

For the purposes of consistency across different national regulatory authorities and to enable accurate statistics to be compiled, the following definition of accident, taken from ICAO, will be assumed for all IOPG reporting purposes:

Accident - An occurrence associated with the operation of an aircraft which, in the case of a manned aircraft, takes place between the time any person boards the aircraft with the intention of flight until such time as all such persons have disembarked or, in the case of an unmanned aircraft, takes place between the time the aircraft is ready to move with the purpose of flight until such time as it comes to rest at the end of the flight and the primary propulsion system is shut down, in which:

- a) a person is fatally or seriously injured as a result of:
 - 1) being in the aircraft, or
 - 2) direct contact with any part of the aircraft, including parts which have become detached from the aircraft, or
 - 3) direct exposure to jet blast or rotor downwash, **except** when the injuries are from natural causes, self-inflicted or inflicted by other persons, or when the injuries are to stowaways hiding outside the areas normally available to the passengers and crew; or
- b) the aircraft sustains damage or structural failure which:
 - 1) adversely affects the structural strength, performance or flight characteristics of the aircraft, and
 - 2) would normally require major repair or replacement of the affected component,
 - 3) **except** for engine failure or damage, when the damage is limited to a single engine, (including its cowlings or accessories), to propellers, wing tips, antennas, probes, vanes, tyres, brakes, wheels, fairings, panels, landing gear doors, windscreens, the aircraft skin (such as small dents or puncture holes), or for minor damages to main rotor blades, tail rotor blades, landing gear, and those resulting from hail or bird strike (including holes in the radome); or
- c) the aircraft is missing or is completely inaccessible

Because the ICAO definition is aimed primarily at fixed-wing flights terminating on land, the following is added for clarity over the particular area of ditching or water landing:

“Where the aircraft intentionally or unintentionally ditches or lands on water as the result of a mechanical/system failure or aircrew error, and the aircraft cannot regain flight or is not subsequently recovered without sustaining the damage detailed in b) above, it will be considered an accident for the purposes of the IOPG aviation safety statistics.”

For example, a ditching that resulted in a subsequent, but not necessarily immediate, rollover and/or sinking and major repair due to water damage, would be considered an accident for IOPG statistics. A ditching where the aircraft remains upright on its floats and is recovered with only minimal damage, including the damage due to water ingress, would not be considered an accident, unless paragraph a) applied.

Note: The following are not considered accidents: experimental test flights, sabotage, hijacking, terrorism, or direct military action.

Aircraft

Any machine that can derive support in the atmosphere from the reactions of the air other than the reactions of the air against the earth's surface.

Aeroplane

A power-driven heavier than air aircraft, deriving its lift in flight chiefly from aerodynamic reactions on surfaces which remain fixed under given conditions of flight. (ICAO Annex I, Annex 6)

Annual flight stages per aircraft

The average number of flights per aircraft for the reporting year. Calculated as:

- $\text{Flight stages (year)} / \text{Fleet size (year)}$

Annual hours per aircraft

The average number of hours flown per aircraft for the reporting year. Calculated as:

- $\text{Hours flown (year)} / \text{Fleet size (year)}$

Average stage duration (minutes)

The average stage duration in minutes. Calculated as:

- $\text{Hours flown (year)} \times 60 / \text{Flight stages (year)}$

Cargo (as an activity)

Flights involving carriage of materials only.

Crew

A person assigned to perform duty in an aircraft during flight time.

Fatal Acc. 100k Hours

The number of fatal accidents per 100,000 flight hours:

- Fatal accidents/(hours/100,000)

Fatal accident

Aircraft accident occurrence involving one or more fatalities to the occupants (passengers or crew) – see Fatal injury.

Fatal injury

An injury that results in death in the accident itself, or up to 30 days after the accident.

Fleet

A number of aircraft operating together or under the same ownership.

Flight stage

The operation of an aircraft from take-off to its next landing.

Flight stages per day

The average number of flight stages per day. Calculated as:

- Flight stages (year)/365

Geophysical (as a helicopter activity)

Onshore geophysical activity.

Heavy Twin (as a helicopter type)

Heavy Twin engine helicopter capable of carrying more than 13 passengers.

Helicopter

A rotorcraft that primarily depends on engine driven rotors for motion. Helicopter is an aircraft sub-category.

Hours flown

Aircraft hours are based on “block-to-block” time (i.e. from the moment the aircraft is pushed back from the gate or starts taxiing from its parking stand for take-off to the moment it comes to a final stop at a gate or parking stand after landing); also known as block time.

Incident

An occurrence, other than an accident, associated with the operation of an aircraft which affects or could affect the safety of operation.

Injury

Any injury that requires medical attention beyond first aid. See Fatal injury.

Jet (as an aeroplane type)

All non-propeller-driven aircraft.

Light Twin (as a helicopter type)

Small twin engine helicopter capable of carrying up to 9 passengers.

Major (as an aircraft damage classification)

Damage or failure that adversely affects the structural strength, performance, or flight characteristics of the aircraft, and which would normally require major repair or replacement of the affected component. Not considered in substantial damage are: engine failure or damage limited to an engine only, bent or dented skin, damage to landing gear (to include wheels and tires), flaps, or wingtips.

Medium Twin (as a helicopter type)

Medium Twin engine helicopter capable of carrying between 10 and 13 passengers.

Near miss

A narrowly avoided event having safety implications to all types of (aviation) operations.

Number of fatalities

The total number of crew and passengers who died as a result of an accident. See Fatal injury.

Offshore (as a helicopter activity)

All offshore helicopter activity.

Other oil industry support (as a helicopter activity)

Used to specify where an incident cannot be logically classed under any other category.

Passengers carried

The number of passengers carried is obtained by counting each passenger on a particular flight (with one flight number) once only and not repeatedly on each individual stage of that flight, with a single exception that a passenger flying on both the international and domestic stages of the same flight should be counted as both a domestic and an international passenger.

Passengers flown per year per aircraft

The average number of passengers flown per aircraft for the reporting year. Calculated as:

- $\text{Passengers (year)} / \text{Fleet size (year)}$

Passengers per day/5 day week (assume 260 days)

The average number of passengers carried per day. Assumes a 260-day year. Calculated as:

- Passengers (year)/260

Pipeline (as a helicopter activity)

Onshore pipeline surveys and support.

Serious Incident

An incident involving circumstances indicating that an accident nearly occurred.

Note 1 -The difference between an accident and a serious incident lies only in the result.

Note 2 - Examples of serious incidents can be found in Attachment D of Annex 13 and in the ICAO Accident/Incident Reporting Manual (Dot 9156).

Reference: ICAO Annex 13

Single Engine (as a helicopter type)

Single Engine helicopter.

Seismic (as a helicopter activity)

Onshore seismic surveys.

Single Piston (as an aeroplane type)

Single Engine Piston aeroplanes have one piston-powered engine connected to the propeller, which provide thrust to move the aircraft on the ground and through the air.

Single Turboprop (as an aeroplane type)

Aeroplane powered by a Single Turboprop engine.

Stage

See flight stage.

Total loss (as an aircraft damage classification)

The aircraft is not repairable, or, if repairable, the cost of repairs exceeds 50% of the cost of the aircraft when it was new.

Twin Piston (as an aeroplane type)

Twin Engine Piston aeroplanes have two piston-powered engines connected to propellers, which provide thrust to move the aircraft on the ground and through the air.

Twin Turboprop (as an aeroplane type)

Aeroplane powered by two turboprop engines.

This page is intentionally blank

This Report presents the safety performance of the aviation industry involved in both upstream and downstream operations reported by participating IOGP Member Companies for 2013-2025. It is published as part of the IOGP data series.

The data presented have been collected specifically from Member Companies of the International Association of Oil and Gas Producers (IOGP).
